

Cloud Fax Service

The Enterprise Standard for Secure, Reliable Cloud Fax Processes

The InterFAX Internet Fax Service is a high-capacity, reliable, and globally accessible service that enables transmission and reception of faxes from any internet-connected application, with no installations.

Overview

Whether you need to enable faxing from one desktop or one thousand, InterFAX is designed to adhere to your requirements. An unlimited number of users can be set up under one account, each with its required services and inbound or outbound queues. InterFAX is just as easy to install whether your business needs faxing capabilities from a single location, from a company campus, or from multiple offices around the world.

Simple Pricing

InterFAX service pricing is easy to understand, with no hidden costs. Fax transmission is entirely usage-based, which means clients only pay for successfully sent faxes. Fax reception is subscription-based and includes a generous allowance of included pages each month.

Reliability and Stability

InterFAX offers its clients better than 99.9% service uptime. The underlying system is deployed across two geographically-separate, highly specialized data centers, each of which has redundant internet access, mains supplies, and networking. In case of an outage in the main data center, the secondary data center kicks in with no changes necessary on the client side for continuous operation.

Benefits

- **No Installation** - Send faxes from your regular email program with no installations - no phone lines, no modems, and no software to install.
- **Excellent Rates** - Low rates, combined with no setup charges or monthly subscription fees offer you the best value around. You only pay for what you fax.
- **No Maintenance Costs** - InterFAX eliminates the need to purchase fax hardware, fax software, and phone lines.
- **Fast Adoption** - Our developer API supports a wide variety of development languages and seamlessly integrates into your application scripts.
- **Scalability** - InterFAX is fully scalable - expanding and contracting naturally with your evolving faxing requirements.
- **Cost Control** - View documents, creation times, or costs of individual faxes, and manage your faxing cost centers online through web-based interfaces.
- **Privacy and Security** - Inbound fax encryption guarantees data security with peace of mind that all servers are housed in secure environments, only accessible to approved personnel.

A Robust, International Communications Network

With multiple fax server access points, or POPs, worldwide, InterFAX offers clients a variety of global inbound fax numbers, as well as multiple routes for sending faxes in case of telecommunication outages and bottlenecks.

Built with Developers in Mind

An XML Web Service API enables developers to add faxing capabilities to new and legacy applications, as well as shrink-wrapped applications. Through our developer channel, InterFAX has been successfully integrated into online/web ordering systems, CRM systems, travel industry systems, and a variety of industrial applications.

The developer program is free to join and free to use. Developers can send as many faxes as needed for their development process. Our application engineers are at hand to offer integration assistance on an online developer forum or through a dedicated support channel.

Send Faxes from Any Application

Send faxes via email directly from your favorite email program - Outlook, Gmail, or any other email program. You can also send and receive faxes directly from within cloud repositories such as Google Drive . Using our fax API, you can integrate our fax service with any enterprise application and send faxes online directly from your in-house application.

Send and Receive Fax via Email

With just an Internet connection, you can easily send and receive faxes from anywhere using a PC or a mobile device. Whether you are one person sending faxes from your home office, or an organization with thousands of employees, InterFAX scales to your needs to provide the convenience of faxing via email.

- Easily send faxes from any email program, business application, or mobile device
- Receive faxes anywhere, including your mobile device
- Faxes reach recipients directly, with no lost faxes or missed orders
- Maximum security with inbound fax encryption
- Manage multiple senders with full cost control
- Local, dedicated fax number with no phone lines, modems or software to install
- Excellent rates with no setup charges or monthly fees
- Eliminate costs related to equipment, save maintenance and telecom costs
- Receive top notch support in your local language
