

WIRELESS

PULL CORD ALARM SYSTEMS

The KTP Long-Range Pull Cord Alarm System has been specifically designed to ensure that in an emergency situation when the pull cord is activated in bedrooms, bathrooms and disabled toilets, the alarm will be responded to promptly.

LONG RANGE WIRELESS PULL CORD ALARM SYSTEM

Unlike smaller localised alarms, which have historically been fitted, our system sends the alarm back to a main central point, i.e. reception area or manned security desk, ensuring that in an emergency situation the person will be attended to within an appropriate timescale. This, in certain circumstances, could be the difference between life and death!

WHY A WIRELESS PULL CORD SYSTEM?

The main benefits of our Wireless Pull Cord System are:

- An immediate “Long Range” Alarm that will be promptly responded to.
- Suitable for disabled toilets, bedrooms and bathrooms.
- Suitable for listed buildings where cabling is an issue.
- Receiver highlights for staff which bedroom/toilet alarm has been activated.
- Provides peace of mind and an extra level of protection for visitors with impairment.
- Helps service providers and employers comply with the Equality Act 2010.
