Case Study

Product: Scott Safety Low Cost Face Mask

CAL International have built a relationship with Scott Safety for delivering quality engineered products.

CAL International have designed and improved many of the new and existing Scott Safety product range.

The new LCFM project (Low Cost Face Mask) involved a total Value Engineering investigation and design rationalisation programme with **Scott Safety** marketing and engineering teams.

CAL International delivered the project on time and on budget and continued it's excellent relationship with Paragon Rapid Technologies who produced all pre-production prototypes.
