Protecting Patients from harm:

Fully networked system that provides real-time visibility of Patients and also supports Asset Tracking and Staff Duress

Wandering and disoriented patients can come to harm if they go astray, but limiting their freedom can cause unnecessary stress and anxiety in addition to loss of dignity. The AllGuard™ Wandering Patient Protection System gives patients freedom while you keep a virtual eye on them in making sure they don't get into harm's way in a gentle and respectful manner. AllGuard™ actively monitors and instantly notifies you of any alerts and alarms triggered by the AllGuard™ tags as a result of an impending risk.

Smallest and Lightest Tags including a patented Tamper Detecting tag

Protect only your Perimeter or add Tracking and Location for full coverage

Add Asset Tracking, Location and Security as well as Staff Duress functionality

Enterprise-class server supports Centralized Monitoring of disparate locations

Video Surveillance integration provides live view of event site saving staff time

Our Active RFID Patient Tags are the lightest and smallest available in the market so you can be assured of offering the greatest comfort possible for all your patients. Tags are easy to apply using standard patient bands. Tamper Detecting Tags are also available for increased security of high risk patients. These tags use unique patented bands that have no metal contacts that could bend or corrode, thus causing reliability issues. Whether implemented as a Perimeter Security system, or as a full-featured Tracking, Location and Security system, AllGuard™ technology delivers unparalleled safety for your patients.

Contact GuardRFID to find out how you can use Active RFID technology to elevate your patients safety to the next level.
