GANTNER Product News  
Innovative New Terminal, Locker Locks and App Solutions

## Access and Check-In Innovations

GT7 Generation of Devices Beyond Anything Experienced So Far

The newest generation of GANTNER readers out-pace anything known so far in terms of access and check-in solutions. The GT7 product range offers numerous innovative, technological novelties, integrated into an elegant hardware design.

The new GT7 terminal with and without fingerprint reader stands out by its highlights such as RFID, NFC and BLE identification or the unique concept of its app, which is uploaded onto the universal hardware and determines whether the device is to be used as access, time or info terminal.

The clear 4.3" colour display with intuitive touchscreen, integrated acoustic interaction and its elegant modern, flat design turn the new GT7 GANTNER device generation into true "must-haves" for every fitness club.

« The new GANTNER Cloud platform provides centralized configuration as well as update functions without software installation - 24/7. »

### HIGHLIGHTS

- Clear 4.3" colour display with intuitive touchscreen, with or without fingerprint reader
- Contactless RFID reader for all common technologies, including NFC data carriers, smartphones via app and BLE
- Innovative app concept, enabling the client to choose whether the device is to be used as access, time or info terminal. A change of function is easily possible at any time
- Simple installation and convenient plug & play start-up
- 24/7: central configuration and update functionalities via gantner.cloud platform (without installing a software)
- Acoustic interaction and optional camera, microphone and barcode reader available

## New Solutions for Optimal Organisation of Locker Systems

Battery Powered, Electronic GL7p Locker Lock for Doors Mounting

The GL7p is a battery operated, electronic RFID (Radio Frequency Identification) locker lock, available with and without PIN code pad. This innovative, award-winning design lock is the ideal solution for implementing a cost-efficient, safe and intuitively operable electronic locker locking system for the safe locking away of personal belongings. The locks are suitable for almost any locker material (also single-walled metal doors) and are not wired and thus can be simply retrofitted into existing locker systems - existing drillings of mechanical cylinders can easily be re-used.

As the multifunctional GL7p is operated via data carrier AND/OR PIN code, this allows for a wide range of applications and security levels depending on the client's requirements. For instance, differing user groups and security levels can be organized by combining contactless RFID technology (identification) with PIN code (verification).

### HIGHLIGHTS

- Available with and without PIN code pad – mixed implementation of both versions easy to realize
- Mobile version available – BLE and NFC radio interface
- Mechanical locking (motor) for highest reliability
- Unambiguous status display due to button position
- Sleek, elegant design, low installation height – intuitive operation
- Maintenance-free, low energy consumption, environmentally friendly
- Possibility of customized printing of the operating button
- Easy retrofitting of existing lockers, no wiring, existing drillings can be used further on – suitable for all locker materials

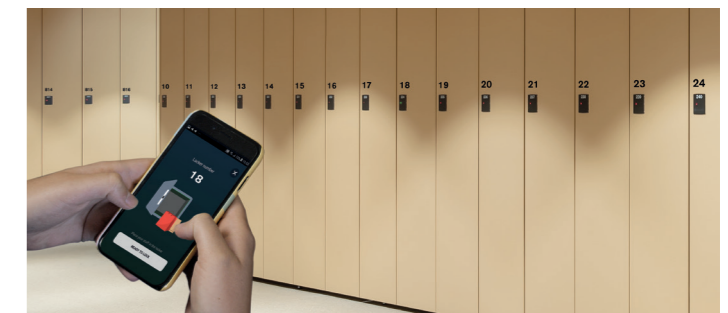

## Two new app solutions provide even more efficiency and comfort

GANTNER has developed not one, but two new apps for its electronic locker locking systems

### Lock Pal app for members

Thanks to the new LockPal app, smartphones can now replace keys for networked online locker locking systems. The app is designed for members, who want to download the app to their smartphones and use it to either lock their personal or an arbitrary locker. The display shows which lockers are available. Your members choose a locker on their smartphone, place their belongings into it, and lock it via app. This way personal smartphones can replace forgotten data carriers (membership card, wristband) at any time.

### MoLA app for operators

The second app innovation by GANTNER is a configuration app for practical, mobile adaptation of our battery operated locker locks. The MoLa (Mobile Locker Administration) app is NFC-technology based, with which the GAT ECO battery powered locker lock series can be easily and comfortably configured and administered.

With a smartphone, authorized personnel can make changes to the locker versions at any time, without having to carry an additional notebook around. This leads to time and cost reductions and decreases the technicians' effort tremendously.
