- ✓ Efficient absorption of moisture and odours in animal housing and bedding  
310:1 % water absorption.  
226:1% oil absorption. As per TDS
- ✓ No chemicals 100% natural Diatomaceous Earth
- ✓ Suitable for greenhouse and garden

**INSTRUCTIONS FOR USE TO CLEAN & DRY**

Operators must wear protective dust mask when dusting large enclosed areas. For large housing a fan or blower may be used. Guideline application rate 200g per 3 cu. metres.

For small areas, use the puffer bottle to coat walls, roof areas, floors, bedding and nest boxes, where it will absorb moisture and odours e.g. urine ammonia. Effective on pet bedding, loose straw and other livestock bedding.

Suitable for animal dust bath to self clean. The DE powder can then be brushed off or animals may clean themselves.

Codex Food Grade amorphous silicon dioxide.

Ideal for horticultural use, keeping bulbs and seeds dry and proven to aid earlier germination. Acts as a deterrent to slugs and snails when sprinkled in a thick layer around plants, while the natural available silica and physical properties of the DE powder condition the growing medium, holding and releasing water and nutrients as the plant requires, resulting in earlier flower/fruit set, improved plant strength and greater yield, as proven in trials.
