Sirius™ is the first in a new generation of automated retail solutions by Intelligent Vending Ltd. Utilising a large 46" HD touch screen, a powerful Windows® PC, and our core VendHook™ software, Sirius™ enables a dynamic, interactive retail platform with limitless possibilities.

At its core, our Sirius™ automated retail solution is built up of three key Intelligent Vending elements:

### VendHook™ PC Control Software:

VendHook™ is our in-house designed 'all-in-one' software platform which dramatically speeds up development and deployment time for next generation 'Intelligent Vending' machines. Our software seamlessly manages and offers full control of all mechanical, payment, and peripheral system functions. The system can be extended with plugins or interfaces created using Microsoft® .NET languages. Furthermore, the socket API enables integration with any other socket-capable language or technology, giving developers of our system the freedom and flexibility to use their preferred technology and tools, or those of the future.

### VendHive™ Bi-Directional Cloud Platform:

Our advanced VendHive™ system is a fully bi-directional 'Internet of Things' (IoT) cloud platform, which provides comprehensive logging, reporting, and real time control over all machine and system functions. Data transfer and syncing are seamless with no downtime to machines such as those associated with DEX EVA-DTS polling, the traditional standard.

Change product prices, view detailed statistics, download new plugins - all these actions and more can be completed with a few simple clicks.

### VendMesh™ PCB Controller:

Communication at a hardware level has been greatly improved over standard systems with our own Intelligent Vending designed VendMesh™ control board. This advanced PCB enables full physical control of all machine functions through a simple USB interface. This gives total PC command over every component, and a rich self-awareness for fault finding and diagnostics, thereby offering distinct advantages over traditional vending machines and retro-fit approaches.

### Payment Options & Consumer Receipts:

Not only can our Sirius™ machines be fitted with standard coin changers and note readers, our platform has also received full UK bank accreditation to the latest Visa and MasterCard standards for use with Chip & PIN payments (with no upper limit on transaction value), as well as with more standard Contactless and NFC payments.

This range of functionality gives Sirius™ elite status, which is further enhanced by our ability to offer an itemised receipt, branded to customers' requirements (including tax breakdowns where needed).

### Next Generation Tech Add-Ons:

Facial recognition cameras, gesture control modules, tech top-hats, sound systems and more are available as standard hardware add-ons via Intelligent Vending!
