

Kautex Textron

Czech Republic / Ystrad Mynach

Scope of Project:

Relocation of Blow Moulding Machine, Czech Republic, to UK site

Trojan-Mek attended the Knezmost site,, Czech Republic, to dismantle the blow moulding machine used in the manufacture of windscreen wash systems.

The dismantle process included match-marking electrically and mechanically, before loading to transport using a 40/60 Versalift.

Two Euroliners were utilised to ship the machines to Ystrad Mynach where the machine was reinstated by the same Trojan-Mek dismantling team.

The project required seamless communication and collaboration with all project personnel at both the Czech Republic and South Wales sites.
