Nutricare Fertilisers

We supply a complete range of Nitrogen, Phosphate and Potassium fertilisers and specialise in complex granular NPK compounds with Trace Elements and Micro Nutrients designed specifically to suit African crops and soils.

Different fertilisers for different purposes

There are many different fertiliser products, and Nutricare Fertilisers is specialised in mineral fertilisers which are convenient to transport, store and apply. Very importantly, they also give excellent value for money.

Mineral fertilisers are in the form of granular, crystalline or powder.

Complex Compound NPKs :

Raw materials, taken directly from nature, contain one or more different nutrients, while a manufactured product is designed to meet specific crop nutritional requirements. These are called complex compound NPKs. Additionally, compound NP's, NK's and PK's can be produced with and without micro nutrients to meet different requirements.

Typical NPKs we supply to Africa are: NPK 25-5-10+3S, NPK 25-5-5+5S, NPK 22-6-12+te, NPK 20-10-10, NPK 17-17-17, NPK 15-15-15sop, NPK 10-24-20+S+B, NPK 10-18-24+S+B, NPK 10-20-10+6S.

Working closely with the development laboratories of European manufacturers and farmers in the field we have provided successful solutions for the increase in yield and quality of all the significant cash crops of East, Central and North Africa.

All nutrients are important to living plants, and a balanced availability of nutrients also ensures healthy growth and maximum yields. However, some nutrients have proved in practise more important than others to certain crops.

Improvement in soil fertility in many areas is seen as a matter of urgency.

Nitrogen Fertilisers :

- Ammonium Nitrate AN (N32-34 % N)
- Ammonium Sulphate AS (N 21 %, S 24 %)
- Ammonium Sulphonitrate or Ammonium Nitrosulphate ASN (N 26 %, S 15 %)
- Calcium Ammonium Nitrate CAN (N 26-27 %, CaO 2-10 %, MgO 2-4 %)
- Urea (N 46 %)

Phosphorous Fertilisers :

- Single Super Phosphate (SSP , 18-20 % P2O5 with approx 10-12 % S)
- Triple Super Phosphate (TSP 46 % P2O5)
- Monoammonphosphate (MAP 11-52-0)
- Diammonphosphate (DAP 18-46-0)
- Compound NPs (in which N and P2O5 ratios can be adjusted), NP 23-21-0+4S etc.

Potassium Fertilisers :

- Muriate of Potash also called Potassium Chloride) – MOP 60 % K2O with approx 45 % Cl
- Sulphate of Potash – SOP 50 % K2O and 18 % S

Both Potassium products as sold in crystalline and granular form.

Water soluble Fertilisers :

Water Soluble Fertilisers are used in greenhouses and open field irrigated areas or sprayed as a foliar fertiliser.

Typical water soluble fertilisers are :

- NPKs, which can be tailor made to meet crop nutritional requirements
- Calcium Nitrate (CN or CaNit)
- Potassium Nitrate (KNO3 or NOP)
- Monopotassiumphosphate (MKP)

Packaging and Bag Markings:

We offer products in 25 or 50 kg WPP/PE or laminated bags printed with buyers markings, in big bags or in bulk. In case of bulk shipment, printed bags can be loaded onboard.

50 kg bags are normally shipped with buyers markings, or with neutral sellers markings.
