FLOOD LIGHT

WHITE LED FLOOD LIGHT

Benefits

- Low Power Consumption
- LED Technology
- Aviation White
- Robust Design
- High Reliability

Details

The white LED floodlight for use on helicopters to assist visibility of the main and tail rotors during night operations in confined spaces. The system is intended to illuminate three aspects of the main rotor disc (left, right and forward) and the tail rotor disc.

The unit is mounted vertically on the helicopter projecting a beam of light 30° vertical and 60° horizontal to 10° of maximum. Other beam angles can be accommodated.

The operating voltage range is 18 to 32V DC and the connector is a D38999 type.

A bracket can be added to provide other areas of illumination.

The light is qualified in accordance with RTCA/DO160G.

Subject to change without notice. Any liability for errors and omissions is excluded.
