

ABOUT US

The digital landscape is transforming

Can you adapt?

ABOUT US

Meet LayerV. Born in the cloud.

The next generation system integrators
and managed service providers

LayerV are specialists in cloud solution integration and trusted partners with Amazon Web Services and Microsoft's Cloud Platform. We're experts in the management of the modern cloud infrastructure. We consult on the planning, migration, monitoring and optimisation of cloud services and promote lean business models to maximise cost savings while delivering world-class security, reliability and quality of service.

A trusted partner

When you engage LayerV to integrate your systems into the Public Cloud, you're getting more than a service provider. We're here for the long term as trusted partners to smooth your business' journey to the cloud and beyond. We're your Virtual Layer, providing our expertise and services on a 24/7/365 basis to our clients and partners.

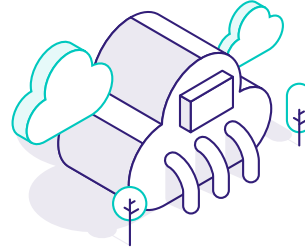

SERVICE OVERVIEW

A four-layer service for comprehensive cloud integration

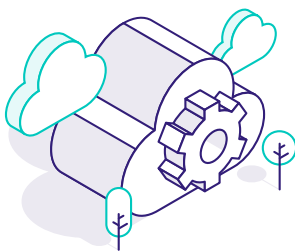

Cloud adoption

If you're making your first journey into the cloud, we'll help you take that important initial step. Our specialism is in integrating your systems, working with you to develop a cloud migration strategy following best practice so that we can ensure maximum performance and cost optimisation. Because our specialists have worked in migrating systems for over 20 years, we're experts in developing bullet-proof strategies for either moving you to the cloud or starting that journey.

Managed cloud

We're small enough to be agile, but large enough to call global financial organisations, government and health entities, enterprise and retail operations our partners. Which is why we recognised the need early on to provide our expertise 24/7/365. We have a near-shore EU-based team utilising Next Gen Cloud Tools to proactively monitor cloud infrastructure for all our partners, ensuring that when you need LayerV, you've got us.

Cloud automation

Our aim is to transform your business with a set of best-in-class pre-existing DevOps skills, tools and processes. Cloud deployments and application releases are delivered and executed smoothly and with the least impact on your business. And because they're secure and audited, you're always in control.

Continuous compliance

Our Continuous Compliance service is born out of a dire need rather than a 'nice-to-have'. Because we're experts in cloud security, we recognised the requirement to create a platform that automates the compliance process, saving you and your business time, money and providing peace of mind. With our 'Plug & Play' Continuous Compliance platform, we can ensure your infrastructure is always meeting industry regulatory standards now and in the future.

A fully-equipped and certified team to help you grow your business

As fast as we've been growing, we've been helping our partners grow too. We experienced 350% growth in our second year and plan to expand more. But that growth is echoed in our partners as well. Early recognition of our skills has led to us being accredited partners to Amazon's Web Services and Microsoft's Cloud Platform.

We have the expertise and experience to help you achieve both FCA compliance and PCI-DSS certification in the cloud smoothly and easily. Our long experience in the IT sector means we're experts in developing strategies, integrating systems and monitoring your cloud-based systems securely and cost effectively.

Free your business. Talk to us today about securing your systems in the cloud. LayerV can help your organisation enhance productivity and deliver real peace of mind in cloud services.
