

**Four design principles drive the work** of Adrian James Architects: 'a love of form making, a passion for light, a strong sense of order, and the desire to design buildings that stand the test of time'. Its recent project, Sandpath House, embodies all of these qualities. The cuboid, two-storey countryside home is both economically and ecologically sensitive. Flat-packed, highly insulated prefabricated panels make up the walls and roof, while the interior is spacious and completely open-plan.

A set of sliding glass doors open straight out onto the garden, allowing natural light to flood the living space and creating a strong visual connection between the interior and the outdoor space. The building's geometric structure is the perfect complement to the architects' more lavish details, such as the suspended staircase (adrianjames.com). **ED**
