

FREE STANDING ROOF GUARDRAIL SYSTEM

EZI KLAMP
HANDRAIL AND BARRIER SOLUTIONS

Product Overview

This system has been specifically designed to provide permanent edge protection where regular access for maintenance and inspections is required, without the need to mechanically fix through the roofing membrane or buildings structure. The strength, stability and safety of the system is obtained with a simple cantilever weight. Ezi Klamp Roof Guardrail System is formed using 48mm diameter galvanised steel tube and fittings with stainless steel grub-screws. This ensures a durable, maintenance free finish. Prompt quotations can be supplied from your drawings or quantities.

Advantages

- Complies with and tested to BS EN 13374:2013
- Guardrail height is set at 1100mm with midrail at 550mm.
- Supplied in kit-form with all posts pre-assembled for easy installation.
- Also available as a collapsible version with hinged posts.
- 20kg counterbalance weights are formed from non-penetrating recycled rubber.

Application

- Permanent edge protection where regular access for maintenance and inspections on roof areas is required.
