## About Us

### We might just be the company you've been looking for.

As we rely so heavily on recommendation, we make sure that our installation teams take pride and care in every single one of our installations, large or small. All of our installation teams are in-house teams and we never subcontract out our installations.

We have a wealth of experience installing uPVC, aluminium, timber and timber alternative windows, doors and conservatories, orangeries, skylights and balustrading. There isn't much out there we can't do. We will take on any size job, from a couple of windows in a residential home all the way up to multi-million pound orders for commercial new build developments.

We don't run any fake sales or have any pushy salesmen. We simply quote a fair price the first time around. Our sales team can attend site to measure up and will email or post a quote through to you a couple of days later. We make the whole process very comfortable, easy and pressure-free.

Our customers often take advantage of our large showroom at Millbrook Garden Centre (TN12 9BT), where they can touch and use the products before they place any orders. We have all of our products on show there.

As Certass registered installers, all of our work is thoroughly and regularly checked to ensure standards stay high. What's more, we go one step further and insurance-back all of the guarantees we

issue, giving our customers total peace of mind. We can also offer our customers finance plans for our products with our status as Barclays Finance Partners.

We believe in independent review services, which is why we ask our customers to review our services on Checktrade and Reviews.co.uk. These are both independently verified review services, which should tell you all you need to know about us. We can also often arrange visits to previous existing customers of ours to show off our products. To explore installations of specific products, you can also head to the projects page on our website.

[www.dwlwindows.co.uk](http://www.dwlwindows.co.uk)

“Professional service from beginning to end. Windows fitted to very high standard. No damage or complications.”

**Mrs Sargeant, Kent.**

## uPVC windows and doors

**Our uPVC windows and doors are thermally efficient, secure and come in a range of colours.**

Our uPVC windows come in four design types. Casement windows, tilt & turn windows, fully reversible windows and French windows. Our uPVC doors are available as either single, double or sliding doors.

Of course, each design type does have its own unique features and benefits and one of our team

would be happy to advise and recommend which design would suit your needs, your property and your budget. This can either be done at an appointment at your property or at our Kent showroom where we have all of the design types and many colours on show.

No matter which design you choose, all of our windows effectively reduce noise, are low maintenance, have several safety & security features and of course, are highly energy-efficient.

### All of our uPVC windows and doors:

- Come with the highest quality Saint-Gobain double or triple glazing. We can advise you honestly on the differences between the two and whether triple glazing is right for you and your property.
- Are as secure as any can be with multi-point shoot-bolt locking mechanisms and excluder devices, which are designed to prevent burglars jemmying the window open.
- Are maintenance-free (except for the odd clean with soapy water every so often).
- Don't discolour. They look great year after year unlike others on the market.
- Are available in a great range of foiled colours to truly complement the nuances and features of your home. These include standard white, white woodgrain, grey, black, oak, rosewood, cream and green.
- Give you peace of mind with our no quibbles 10 year insurance-backed guarantee, which covers the frame, handles, hinges and installation. Everything except accidental damage is covered.

uPVC windows and doors

## Case study

**These new build plots in Tunbridge Wells, Kent needed great windows and doors to go with the large plot sizes and high spec interiors. Our Oak woodgrain uPVC windows, English Door Company entrance doors and aluminium bifolding doors fitted the bill.**

We have a great relationship with this commercial house builder, Clarendon Homes. We have worked with them for many years and will continue to do so. We are their go to company for all windows, doors, conservatories and Loggias.

As with all of the other installations we have carried out for them, the initial drawings arrived with us with designs and specifications quite up in the air. So, we had to look at the spec of the rest of the property and the kind of asking price the properties were going to go for to ascertain the right product for them. Our customer was quite clear that they did not want timber. The high cost and maintenance issues that can sometimes accompany timber has put them off it. We also had to consider the rest of the design of the properties. With oak coloured beams throughout the properties, it was important to create a traditional look and feel.

Taking all of this into consideration, we suggested our woodgrain uPVC windows and our English Door Company double front entrance doors

with aluminium bifolding doors to the rear. We supplied our customer with samples of the two most popular colour choices of our woodgrain uPVC windows and they chose Irish Oak, which goes perfectly with their sandstone surrounds. Then for the double front entrance doors and aluminium bifolds to the rear of the properties, they went for black.

To give equal sightlines, we dummy sashed everything. This essentially means that, from the outside, it looks as though every window could open even though only some can. It makes everything look more symmetrical. We supply and fit quite a lot of dummy sashes for this reason.

The installation took around two weeks for one of our teams to complete. It was a complete success and both properties have now been sold and the families have moved in.

*“Very happy with DWL, we only use them as they can always be relied on to produce excellent work.”*

**Clarendon Homes, Kent.**

## Timber effect windows and doors

R9 RESIDENCE 9

**We have been supplying and installing Residence 9 windows and doors for a few years now. As a product innovation, it has taken the industry by storm. It has filled a gap in the market for a product that looks just as great as timber, but without the maintenance.**

The product is so innovative compared to other products on the market in the following ways.

- Highly thermally efficient with 9 chambers as opposed to the 4 or 5 chambers present in most other products on the market.
- Mechanically joined sashes as well as outer frame to fully replicate 19th century timber windows. This means that the corners on the sash as well as the frame are mechanically joined, not welded like a uPVC window.
- Traditional butt hinges, handles and peg stays.
- Fully foiled rebate so only woodgrain is on show when the window is open.
- Extra-deep 55mm Radlington cill to replicate timber.
- Georgian/Astragal bars and leaded glass to create specific looks.
- Triple glazing available if thermal values and noise insulation is a priority.
- Great colour choices available including Grained White, Corse Lawn, Silvered Oak, English Oak, Cotswold Biscuit and Eclectic Grey.

"Fantastic installation. No hassle. Did as promised. Really like the R9 windows."

**Mr and Mrs Lijesen,  
Kent.**

“Professional, high quality work.  
Delighted with it.”

Mr and Mrs Carter, Kent.

Timber effect windows and doors

## Case study

R9 RESIDENCE 9

**These homeowners came to us through the Residence 9 website. The maintenance free aspect of the product really appealed to them.**

Various meetings at the property and the showroom were held to narrow down on the colour choice. In the end, they decided on English Oak outside and Cotswold Biscuit on the inside finished off with black antique monkey tail handles.

They also opted to pay the extra for mechanically joined sashes as opposed to welded ones to take full advantage of the Residence 9 windows. This is a key feature that makes the windows so unique.

During a meeting at the property, the side project was the “sun room” of the property, where the family spent most of their time. The aim was to let us much light in as possible and keep as much heat as possible. So, the solution was our triple glazed Smart aluminium top hung windows, giving maximum glass sizes and heat retention.

We then moved onto the dormer windows, which were needing a lot of work as well as the new Residence 9 windows. We fitted Anthracite Grey foiled trim to the sides and bottom of the four dormers on the property.

One of our highly experienced installation teams, led by Mark, carried out the installation over the space of two weeks. The family were absolutely over the moon with the job and soon after, placed the order with us to install a new front and back door along with all of the fascias, soffits and guttering to match the work we carried out on the dormers.

“Excellent - very little mess and work done over two very wet days. Very impressed with Storm 2 product & service.”

Mr and Mrs Nancarrow, Kent.

Timber effect windows and doors

## Storm 2 and Flush

evolution

Evolution were the true pioneers of the timber effect window and door range. We have supplied and installed Evolution Storm 2 and Evolution Flush windows right from the start. It stemmed from a gap in the market for a window and door range that looked and felt like timber, but that didn't come with the maintenance or the prohibitive cost.

Evolution comes in two designs. Evolution Storm 2 and Evolution Flush.

Evolution Storm 2 is a stormproof casement window, which means the opening part of the window sits proud of the main outer frame.

The Evolution Flush is, as the name suggests, a flush window like Residence 9, with the opening part of the window sitting flush with the outer frame.

- Both designs feature welded sashes and mechanically jointed outer frames.
- Both are available with a great range of both modern and traditional hardware fittings.
- Both can feature deep 45mm cills to replicate timber ones.
- Both come with Georgian/Astragal bar options as well as leaded glass.
- Both can be fitted with triple glazing for better heat and noise insulation.
- Both systems come with a great range of colour options and can be Kolorbonded any RAL colour for an additional cost.

Timber effect windows and doors

## Storm 2 and Flush case study

evolution

“Was so relieved to find there was a maintenance-free alternative to timber out there. Love the Storm 2 windows DWL have installed.”

Mr Smith, Kent.

This project saw us install English Door Company doors and Evolution Storm 2 windows into the main house as well as into the modern orangery we built for them.

This couple came across DWL after using Google to search for an “Evolution windows installer” in their area. They had seen the products installed on another property and were interested to see how much more they would cost than normal uPVC windows. So they got in touch and arranged for someone from DWL to come out to their home and measure up for the replacement windows and doors. We took along a sample window to hone in on the exact specification and design of the new windows.

The homeowners knew they wanted to go for the “Tudor” colour scheme of a black woodgrain outer frame and white woodgrain sash as they had seen on another property. They also wanted the classic black monkey tail handles and peg stays to create a truly traditional look and feel. The windows would feature Evolution’s unique 36mm thick astragal bars. More unique still was the design we developed with the customers of rectangular 9mm antique lead in all of the top lights. Both of these combined perfectly to create a truly traditional timber effect.

As a registered Evolution windows installer, we were more than capable of walking the customer through every specification and design decision they needed to make when investing so much into their home. The end result is fantastic. The photos really show why Evolution Storm 2 and Flush windows are a great choice for any home; modern or traditional.

“Always helpful and arrive for appointments/fitting on time. Clean working and after sales support good!”

Mr and Mrs Negus, Kent.

## Timber windows and doors

**Timber windows are beautiful. Ours are available in different timber species, colours as well as either stormproof, casement or sliding sash windows.**

With a huge array of products out there to choose from, we have handpicked what we think is the best stormproof and flush timber casement window out there. What's more, the selection we have caters for all needs. Our Accoya wood, which is high performance, highly durable created from sustainably sourced softwood. Our European Oak, which is a durable hardwood. Our European Redwood, which is an engineered laminate all the way to our Sapele, which is a moderately durable hardwood sourced from Africa.

### Our timber windows:

- Achieve great thermal values meaning lower energy bills and a smaller carbon footprint. We can offer an 'A' energy rating with our hardwood timber windows.
- Have choice of cill and frame thicknesses to ensure our customers get exactly what they want.

- Come with a great selection of hardware/ ironmongery options including butt hinges and the popular monkey tail style handles and peg stay sets.
- Have shootbolt locking as standard on both stormproof and flush casement windows, with our stormproof windows able to achieve the coveted Secured By Design Specification.
- Can be top hung, side hung and bottom hung to suit the property's needs down to a tee.
- Can be fitted with astragal bars in a multitude of designs for a true cottage effect.
- Are available in a multitude of colour options, with the option to choose from any RAL colour. At extra cost, you can also have one colour inside and a different colour outside.
- Are available in Accoya, European Oak, European Redwood and Sapele.
- Are available to view in person at our showroom to really get to touch and use them. More technical information regarding our timber windows is available on request. So please do feel free to get in touch.

## Timber windows and doors

# Case study

**Traditional windows are a must when you live in a 300 year old farmhouse property. Choosing the right windows was a crucial decision for these customers.**

Having lived in the property for nearly 25 years at the time, these homeowners were tired of having to repaint their windows every few years. We had just the solution for them: our hardwood timber windows.

Maintaining the look and feel of the existing traditional windows was key.

Firstly, they certainly did not want to compromise on the beauty and heritage feel of their home. Secondly, the property is in a conservation area of natural beauty and only timber windows would be permitted.

After a meeting at the property to run through the product, a further meeting at the showroom was arranged to finalise all the finer details.

They opted to keep the colour exactly the same as their previous traditional windows with white woodgrain finish both sides. They went for black monkey tail handles along with black functional butt hinges on the top hung windows. They chose double glazing to the rear of the property and triple glazing at the front to reduce the noise from the fairly busy road.

We also were required to build a conservatory on the property. The conservatory had to look traditional with decorative cresting and finials along with georgian bar in the top lights. We designed with them a simple yet elegant gable end conservatory, which they would use as their dining room. As standard the roof would have our active self-cleaning blue glazing and standard energy-efficient double glazing in the windows and doors of the conservatory.

After surveying and ordering everything, our installers arrived in around 4 weeks and installed all of the windows in around a week and took a further week to install the fairly large conservatory.

“Having such an old property made us very conscious of the windows and doors we would install in the property. DWL held our hand throughout the process and made it all as easy and stress-free as it could be.”

**Mr and Mrs Murphy, Kent.**

“The service I received was excellent and the quality of the windows and doors installed is exceptional. I would use DWL again and have no hesitation in recommending them to my friends and family.”

**Mrs Jones, Kent.**

## Sliding sash windows

**Sliding sash windows are, in some cases, the only option.**

With hundreds of installations across Kent, Essex, Sussex and London, our sliding sash windows not only create the uniquely Victorian “sash” aesthetic, but they bring all the modern benefits to the table.

Our sliding sash windows are available as either a uPVC-cored window or as a solid timber sliding sash window.

Replicating the undoubtedly beautiful timber sliding sash window, our uPVC sliding sash windows appeal to homeowners who want the look but without the maintenance and re-painting.

Our uPVC sliding sash windows are low maintenance, are available in different woodgrain colours, effectively reduce noise, have several safety & security features and of course, are highly energy efficient.

Our timber sliding sash windows certainly have kerb appeal. If you are willing to pay the extra for timber, you certainly won't be disappointed. They are available with three different operating mechanisms to suit every need and come in either softwood or hardwood.

**With our sliding sash windows:**

- You can choose between white woodgrain, cream, black and oak to complement your home.

- You can personalise your sliding sash windows with great hardware options, which include white, silver and gold.
- You can keep your home secure by fitting the latest locking anti-burglar technology. Our sliding sash windows are all fitted with the latest and best locking mechanisms available to ensure that your sliding windows don't just look great, but keep you safe too.
- You can keep drafts out with triple brush seals.
- You can take advantage of the intelligent fire escape solution. This means you can comply with Part B of building regulations without compromising on aesthetics.
- You can open and close the sliding windows with absolute ease.
- You can clean easily thanks to the tilt and turn feature on our windows.
- You can rest assured in the knowledge that your windows are covered with an insurance-backed guaranteed for 10 years.

Our team will be more than happy to show these features of our sliding sash windows in your home or at our showroom, where we have uPVC and timber sliding sash windows installed.

## Sliding Sash windows

# Case study

**White woodgrain uPVC vertical sliding windows used to great effect in this installation in Essex.**

This customer got in touch with us via a friend, who is a great customer of ours, who has recommended over ten new customer to us over recent years! They are by far the biggest receiver of our recommend a friend cheques. We run a recommend a friend scheme that recognises and thanks people for recommending us with a cheque for 2.5% of their friends' order value. This customer has been really racking up the recommend a friend cheques!

These homeowners had big plans for this house they had just moved into. They planned to totally revamp the property internally with extensions and a brand new large pool house in mind too. Part of these plans were obviously the vertical sliding windows.

The customer was weighing up between replacing the old timber vertical sliding windows with new timber ones or whether to go for uPVC woodgrain ones. We can offer both and we quoted the customer both options, as we often do. In the end, as they were not thrilled by the idea of repainting at all, they went for the maintenance-free uPVC woodgrain option.

The first step was to remove all of the old timber windows, which over time had bowed, warped, rotted and now leaked air and water. After that we installed our uPVC-cored sliding sash windows with a white woodgrain foil, complete with sash horns and traditional hardware. Still fitted with our Saint Gobain Planitherm Total Plus glazed units.

The customers are now absolutely thrilled with the new windows and better still, made a point of how impressed they were with the workmanship and efficiency of Dave and Stuart, our fitting team who completed the installation.

*"Top notch installation.  
Like the sliding windows.  
Would use DWL again."*

**Mr Costella, Essex.**

## Aluminium windows

**Smart and Schüco are the two aluminium window systems we supply and install. Both systems are available as either casement windows, tilt and turn windows or French windows.**

With a multitude of products on the market to choose from, we have done the hard work for you. By using both Smart and Schüco products, we can cover all the bases and offer a product to fit every requirement.

All of the different options are also available to view in person at our showroom to really get a feel for them. In-depth technical information on all of our aluminium windows and doors is available on request. Feel free to get in touch.

### Why Aluminium?

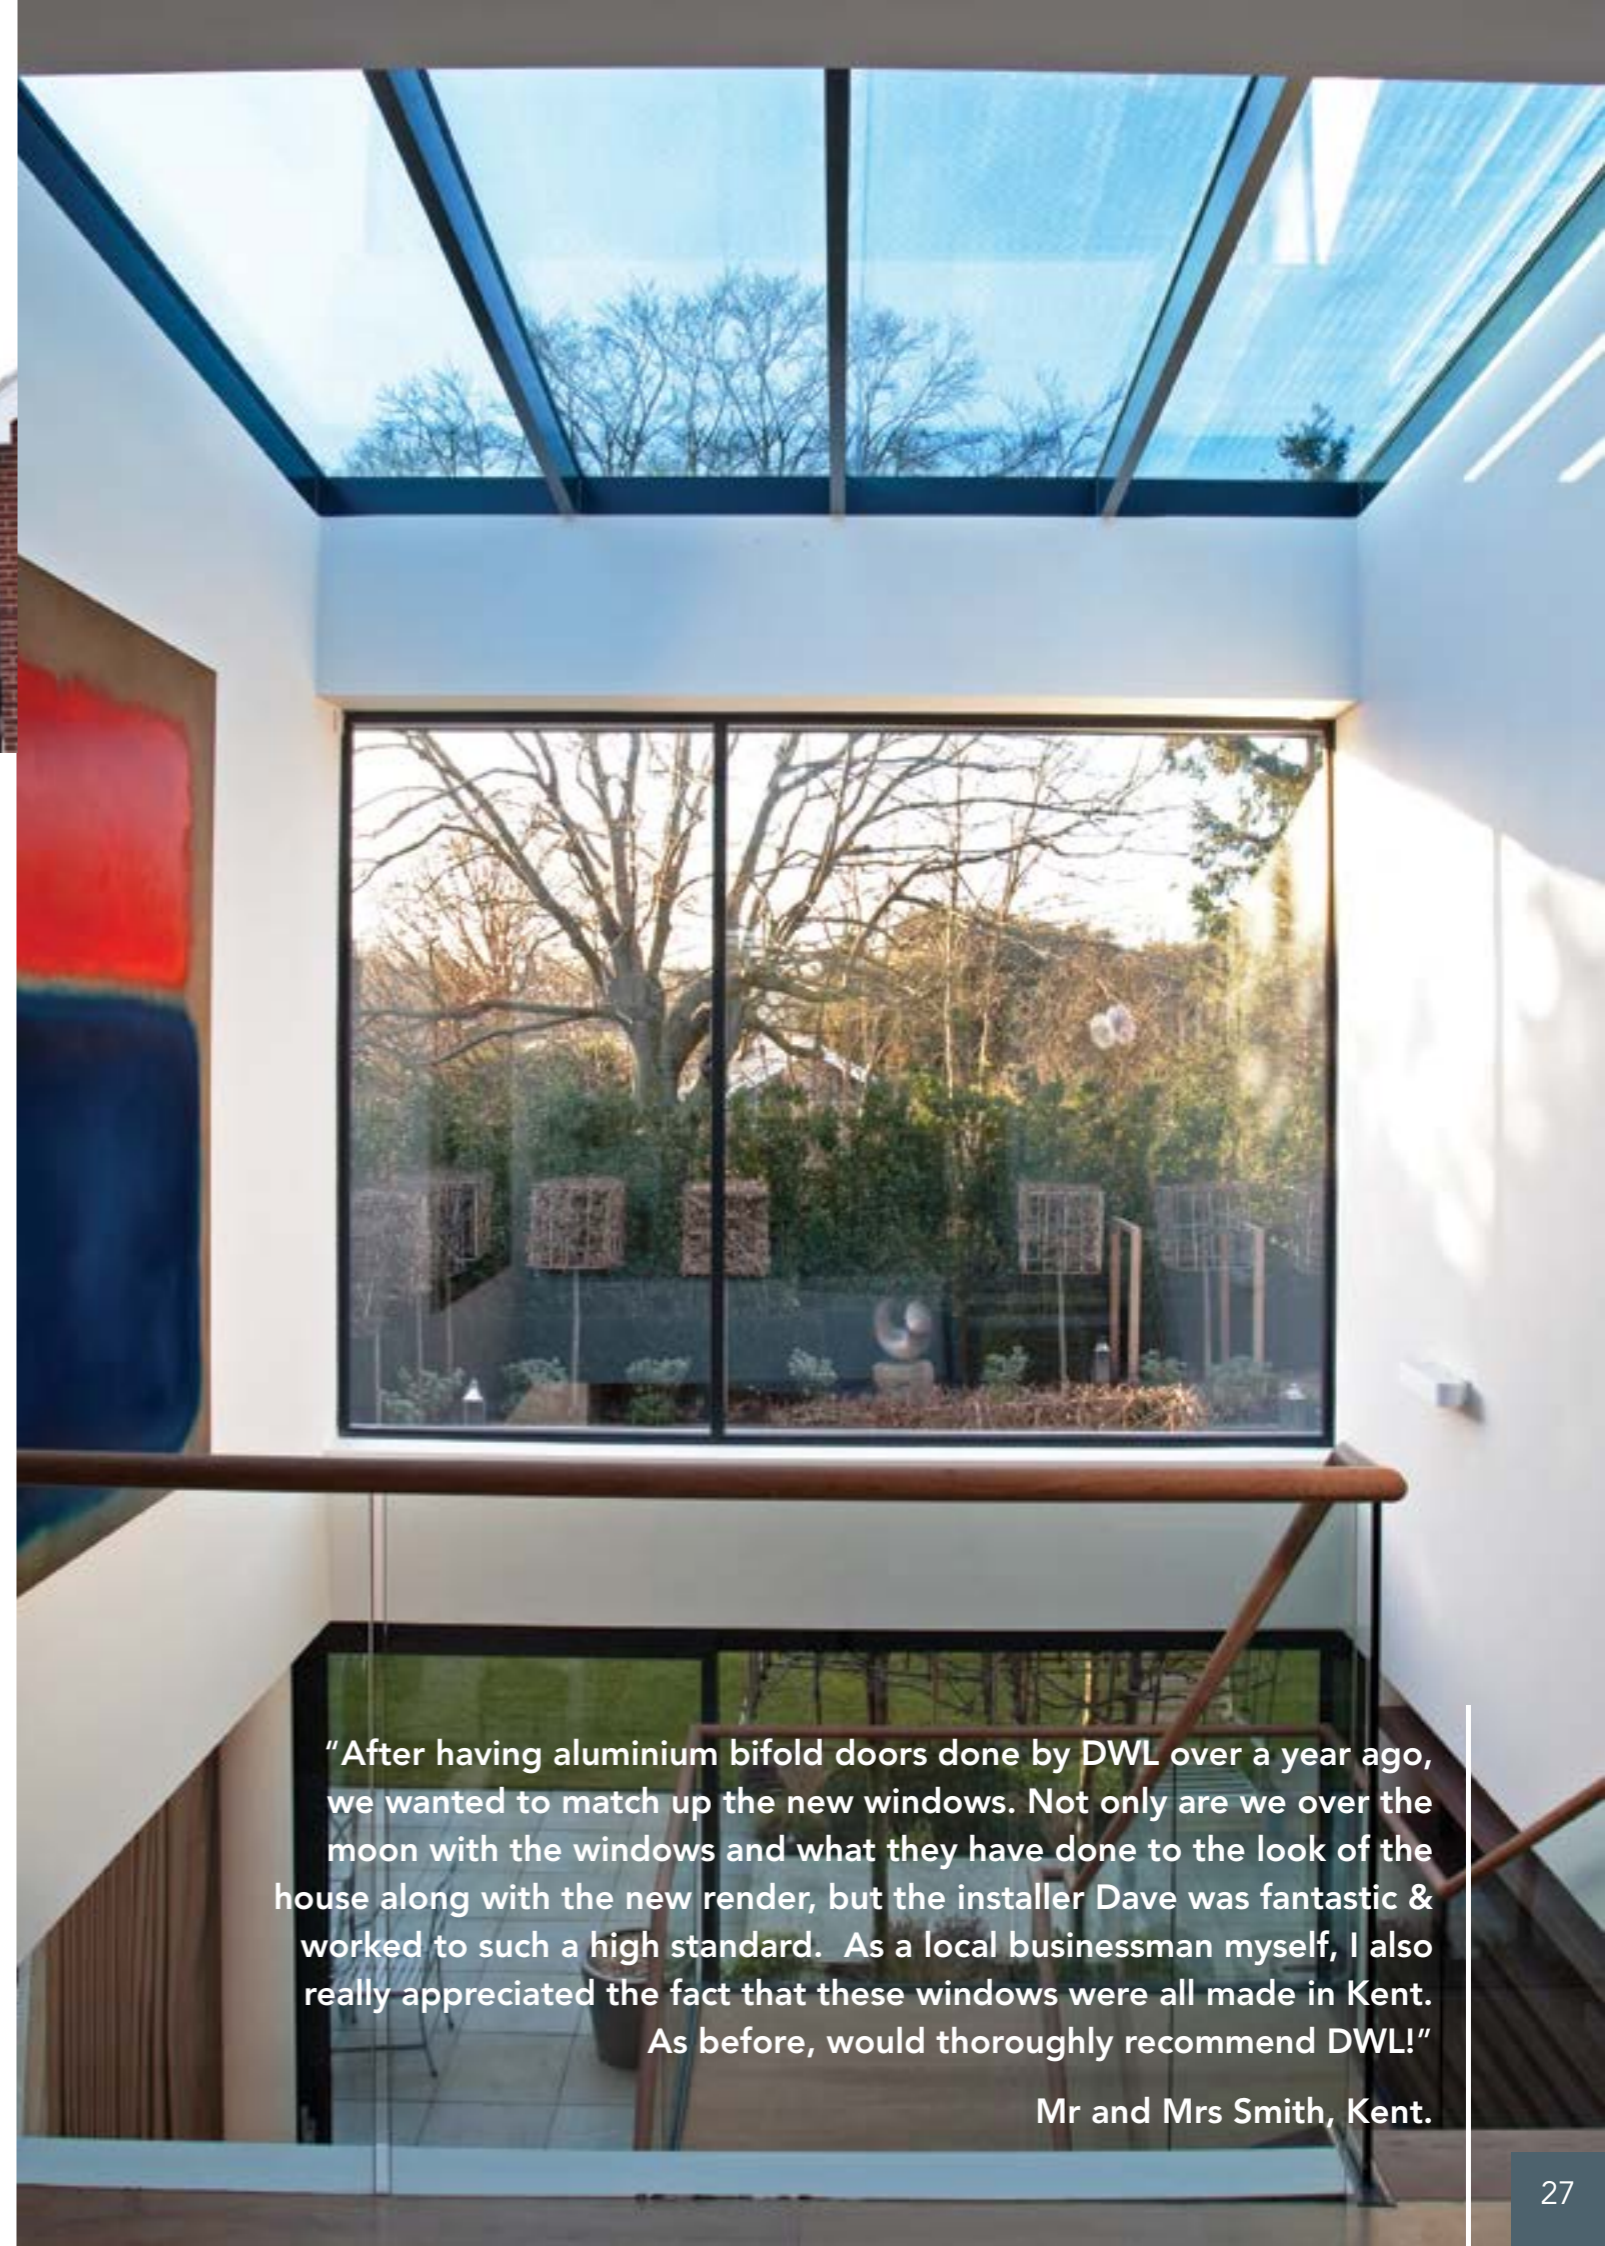

Whether our customers go for Smart or Schüco windows, our customers tend to choose aluminium windows for their home for the following reasons.

The slim frames of aluminium windows make them a must have when trying to achieve both the modern look and also the super-slim traditional critchall window effect.

Anyone who has experienced "old" aluminium windows that are not thermally broken can tell of the masses of water gathered on the cold metal on the inside. Modern aluminium windows, with their thermally broken frame and multi-chambered profile, no longer cause condensation problems. This was a huge breakthrough that has made aluminium windows a much more viable option.

You can have your aluminium windows powder coated in over 200 RAL colours with the option of having one colour inside and another colour outside. This aspect really appeals to many of our customers, particularly because aluminium is the material of choice in many self-build projects.

The longevity of aluminium windows is also a huge factor. Not only is the colour, the metal and the marine-grade powder coating guaranteed for 25 years but the sturdy and robust feel of aluminium appeals to many of our customers.

**"After having aluminium bifold doors done by DWL over a year ago, we wanted to match up the new windows. Not only are we over the moon with the windows and what they have done to the look of the house along with the new render, but the installer Dave was fantastic & worked to such a high standard. As a local businessman myself, I also really appreciated the fact that these windows were all made in Kent. As before, would thoroughly recommend DWL!"**

**Mr and Mrs Smith, Kent.**

## Aluminium windows

# Case study

**As well as white and black, RAL 7016 Anthracite Grey seems to be the most popular colour our customers go for these days. This installation perfectly showcases our dark grey (RAL 7016) aluminium windows, single doors and sliding doors.**

These customers found us online and organised a meeting at the property. We attended the property with a dark grey window sample for the couple

to look at. The way it looked and operated was exactly what they wanted. Our Smart Alitherm 300 casement window with a square bead and satin chrome handles. They went for our standard Planitherm Total Plus double glazing, argon filled with black warm edge spacer bars.

As you can see from the before and after photos, the couple were embarking on a huge transformation of the property. This mainly involved extended out the rear of the property. This meant that the survey and order was to be processed in two stages, with the front of the house being surveyed, ordered and installed

before the rear. So everything was agreed and the first part of the order went ahead.

Around 6 weeks later, we installed the front windows and a couple along the side of the house too. Around a month later, the couple had pressed on with the build and the rear of the property. Absolutely over the moon with the first installation, they pressed the button for the second set of anthracite grey windows and doors.

So we surveyed for a second time and ordered all the metal. Around 6 weeks later, everything was installed successfully once again.

*“DWL can offer windows unlike any other! I went to all the well known window companies and found that they just couldn’t compete with DWL on style, price and individuality. What we have had installed are beautiful, contemporary, aluminium windows that have made our house unique to any other on our road or in our neighbourhood. We’re thrilled and would highly recommend DWL.”*

**Mr and Mrs Bosworth, Kent.**

## Aluminium doors

**smart**  
architectural aluminium

**SCHÜCO**

The aluminium doors that we supply and install come in two systems, Smart and Schüco. Whichever you choose, they will all be fitted with durable hardware, secure locking mechanisms and come in a range of RAL colours to suit any need. As always, any of our team will be more than happy to tailor the colour, hardware, threshold details and overall design to suit your home and needs.

Our aluminium doors come as single, double, bi-folding or sliding doors, using both Smart and Schüco. Our team will be more than happy to demonstrate the differences at our Kent showroom.

### Why aluminium?

There are, of course, differences between Smart and Schüco doors. Mainly in that Schüco doors can be made wider and higher than Smart ones and are more thermally efficient than Smart ones. However, whichever system or design of aluminium door you go for, they all have the following in common.

- Market-beating thin frames, particularly with our Smart Heritage single and double door range.
- Double and triple glazing both available where necessary for thermal or noise insulation.
- A fantastic range of colours. With Smart's Sensations range and over 200 RAL colours to choose from in a matt or gloss finish, you're sure to find exactly the right colour for you and your property.

"DWL had installed windows and doors for three family friends. We required timber look windows with aluminium sliding doors and skylights in our new extension. Right from the start at their showroom all the way up to the impressive final installation, we would wholeheartedly recommend this company."

**Mrs Smith, Kent.**

- Longevity. Not only is the colour, the metal and the marine-grade powder coating guaranteed for 25 years but the sturdy and robust feel of aluminium appeals to many of our customers.
- The option to have shiny chrome, matt chrome, black, white or gold handles.
- The option to have low anti-trip, easy-access thresholds on single and double doors.
- The ability to have single, double and bi-folding aluminium doors opening inwards or outwards to suit the situation.
- A full 10 year insurance-backed guarantee on all aluminium doors plus 25 years on metal integrity and the powder coated colour.

"DWL are the first company we call for glazing."

**Amberley Construction, Kent.**

## Aluminium doors

# Case study

**This beautiful project is one of our favourites, and it's not hard to see why. The photos are testament to the grandeur and unique design of the property, which make it so truly special.**

Amberley Homes build many 'one-off' properties like this throughout the South East of England. They contract us to do all of their glazing work and this project was no different.

The glazing brief was quite simple. Maximum glass sizes with minimum frames were required. This was because the apertures that had been designed into the property were very large and to maximise

glass sizes, a system that could go wider and higher was required. With our help and guidance, the architects assigned to the project quickly realised that Schuco doors were the only option.

Using Smart windows and Schuco doors, the sliding and bifolding doors in the property are three metres high, maximising light and creating a truly stunning end product.

The homeowners chose RAL 7016 'Anthracite Grey', the colour that has become so popular in recent years. Most likely because it matches and fits in with other colours and materials so well.

All of the windows, doors and roofs were powder coated to this matt colour.

Installing was no easy task. Access towers as well as glass lifting equipment were required, mainly to lift the heavy sealed units into the doors, particularly those on the first floor. At their heaviest, some of the glazed units in the sliding doors weigh just under 250kg each. Schuco was the only door system that could handle this kind of weight.

More uniquely, the architects specified what's called 'seamless' or 'frameless' glazing, where glazed units are held together by silicone, as opposed to a chunkier piece of aluminium frame.

"They are our first choice window company."

**A B Canham & Son, Kent.**

## Aluminium curtain walling

**If you need to cover a large expanse with minimal frame, curtain walling is often the answer.**

Curtain walling gets its strength from its 'mullions', which are the lengths of aluminium that run from top to bottom uninterrupted.

Aluminium base plates are fixed into the concrete floor or steel at the bottom and the top of the opening. These base plates have single arms coming out of them. These arms are at different sizes depending on the overall size of the area the curtain walling is required to cover.

The mullion (vertical) frames are then slipped onto the base plate arms, almost like sleeves. This is essential to the rigidity and strength of the curtain walling and is what allows it to withstand strong wind loads.

Horizontal 'transoms' are then fitted, which run across the expanse splitting the frames

horizontally. After that, we glaze the curtain walling with either double or triple glazed units of varying specification.

Generally, the face width of these mullions and transoms is 50mm across. That means that only 50mm of frame can be seen when looking at curtain walling face on. This, along with its strength, is why curtain walling is so appealing to homeowners and architects alike. It maximises glass sizes and minimises frame sizes.

We often install curtain walling in commercial buildings such as schools, hospitals, hotels and offices, as can be seen in these images. However, we are finding ourselves installing aluminium curtain walling more and more in residential properties. This is probably partly due to the 'Grand Designs mentality' that has emerged in recent years for the ultra modern look.

## Aluminium curtain walling

# Case study

### Aluminium curtain walling, entrance doors and windows at a Kent school.

A very good commercial customer of ours who carries out a lot of contracting work on schools invited us to tender this project at The Mascalls School, Paddock Wood. As we carry out a lot of work on schools, we are used to installing large expanses of aluminium curtain walling in short spaces of time – when the schools are empty and the students are on their holidays!

Working in schools presents timescale challenges. There is in some cases, like February and Easter half-term, only a very short period in which all of the work can be carried out. This sometimes means we allocate 2 or even 3 of our installation teams to be on site at once, increasing installation speed without compromising on the quality of the overall installation.

This job was no different. We had to install large screens of our SCW+ curtain walling with aluminium windows and Senior SD entrance door sets within the curtain walling in a short space of time.

As can be seen in the photos, the curtain walling is on multiple floors, which presented it's access difficulties. As is often the case, the main contractor provided access equipment, which was in this case a combination of scaffolding and pre made access towers along with a tele handler to manoeuvre the frames and glass onto the first and second floor sections. That way, all our installation teams had to do was bring the frames and glass as well as their glass suckers.

Surprising as it is, curtain walling can be installed very fast, especially when being done by experienced installation teams. Our teams were only on this site for around 10 days, getting everything installed just in time for all of the students to come back to school.

As anyone who goes to or teaches at the school, our products have, as always, stood the test of time. This is even more impressive for products that are used so regularly and not always carefully.

“Provide a good service,  
competitively priced.”

GSE Group, Kent.

"Excellent job! Exactly the door we wanted. Thank you."

Mrs Mitterdorfer,  
London.

## Aluminium entrance doors

Along with sliding, bifolding and double doors, we also supply and install many single front doors or 'feature entrance doors'. These are single doors that can create a stunning entrance for a home.

Generally the front main entrance door of the property is the main one, so many of our customers take a lot of time deciding on theirs. We offer two systems.

First is our standard Hallmark aluminium range, which are available in many different designs at a very competitive price.

The second is our Hörmann range, which are a bit more specialist and expensive. Both systems feature fantastic and varied designs with many different colours to choose from, as with any aluminium product of ours.

To look at the features and benefits of each, we're more than happy to post or email literature and brochures on each system to you.

## Composite entrance doors

Our composite entrance doors come in three ranges. Our Sliders composite range, our Solidor range and our English Door Company range for that something extra special.

### All three ranges:

- Create a truly stunning entrance at a fraction of the cost of a hardwood timber door.
- Require no maintenance or re-painting.
- Don't swell or bow over time like some timber doors.
- Are very thermally efficient, water and draught proof doors.
- Come with our full 10 year insurance-backed guarantee, which covers the frame, slab and installation.
- Feature multi-point shootbolt and hook bolt locking with the option to upgrade to the 'Secured By Design' specification, a police recognised security standard.
- Are available to see and use at our showroom.

### The Sliders Range

Our standard range of composite doors is our Sliders range.

Available in many designs and colours, our customers do tend to find exactly what they were looking for within this range.

Made with the latest GRP door slabs and fitted with multi-point locks, our Sliders composite doors are thermally efficient, draught and water proof and secure. We can even get our Sliders doors to comply with the stringent Secured By Design police-recognised standard.

We'll be more than happy to email or post you a brochure with the entire selection for you to look at in your own time.

### The Solidor Range

Boasting a huge range of colours and many unique designs, our Solidors are for those looking for something a bit out of the box; something special.

Made with a solid timber core, the the well-known industry slogan, "Sounds like a Solidor" was coined, referring to the sturdy and timber-feel of Solidors. As with any other composite door, our Solidors are fitted with multi-point locks and are thermally efficient and draught/water proof. Our Solidors can also comply with the Secured By Design Specification.

Solidor's 'Design A Door' tool on their website is a great way to configure your new Solidor.

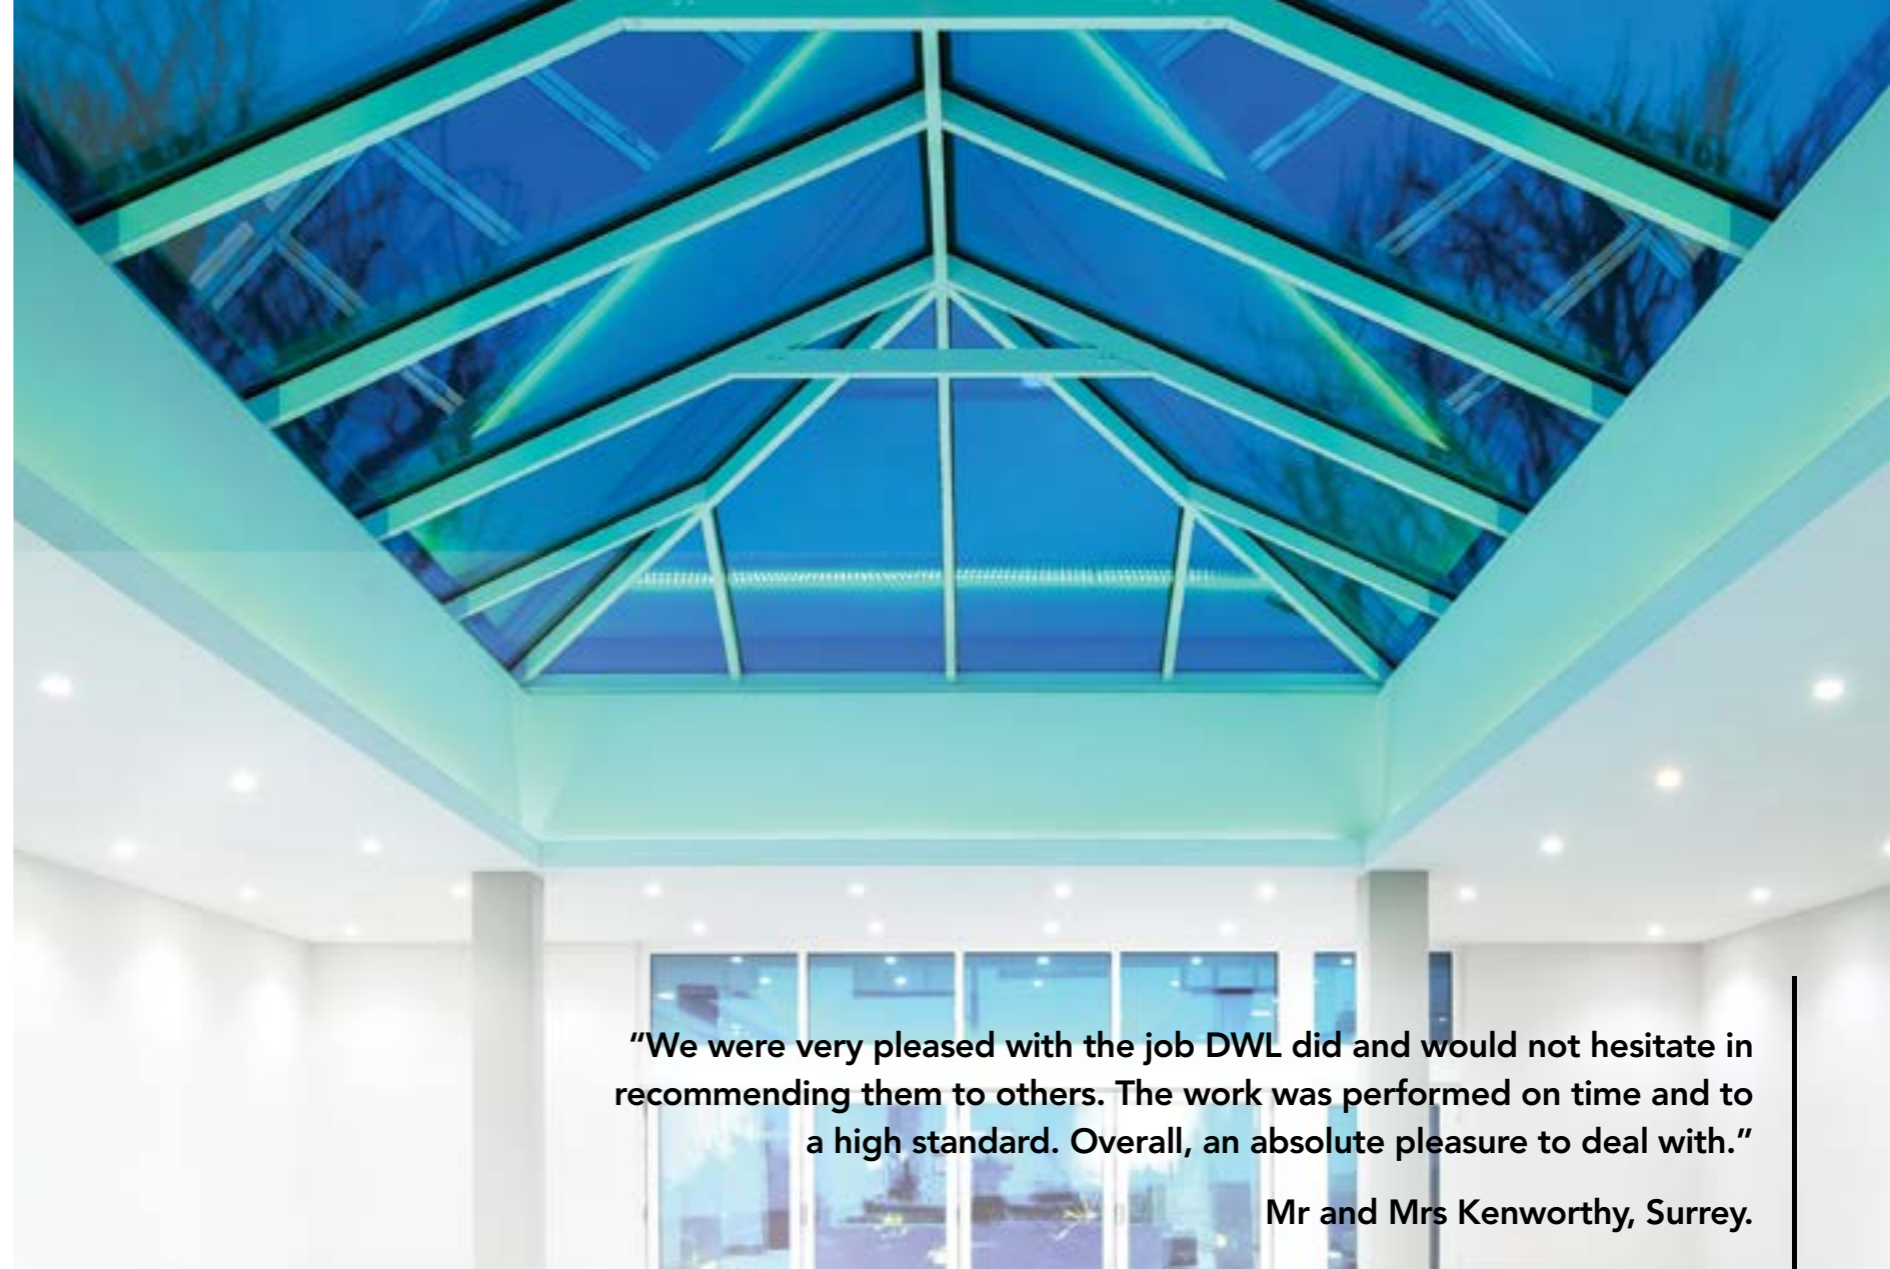

### The English Door Company Range

For our customers going for a traditionally heritage look, an English Door Company door has often been the answer. With an extra-thick composite uPVC core, the English Door is maintenance-free and sturdy as well as beautiful.

These doors not only come in unique designs that can only be found in timber elsewhere on the market, but they replicate timber too, with mechanically joined outer frames, creating an alternative to timber front door collection.

Perhaps our customers favourite aspect of this range is the fantastic hardware range. That is, the handles, knockers and letterboxes, which are all very sturdy and look absolutely great.

**"We were very pleased with the job DWL did and would not hesitate in recommending them to others. The work was performed on time and to a high standard. Overall, an absolute pleasure to deal with."**

**Mr and Mrs Kenworthy, Surrey.**

## Skylights

### Flat skylights

If achieving a flush glazed look is the priority, then look no further than a flat skylight. Beautifully finished powder coated aluminium combined in a flush fitting with double or triple glazed units should do the job. To take a look at some installation images of our flat skylights, head over to the gallery page.

Our flat skylights come with self-cleaning clear and blue glass for above a normal living space or Satinovo (sandblasted) privacy glass for use in bathrooms or any other private area. All of these things can be tailored to suit our customers needs.

In most cases, our flat skylights go into flat roof extensions with aluminium bi-folding or sliding doors opening out onto the garden. When all finished, these open plan spaces always prove to be fantastic light and open living spaces. Quite often, they create our customers favourite living spaces by allowing all of this light to pour in. What's more, by being a one stop shop for our customers, we find we can offer very competitive quotes for the work, as a whole package.

### Pitched skylights

Our pitched skylights or "lanterns" as they are also called, are appropriate for a variety of applications. They can be anything from a small one metre squared skylight above a stairwell all the way up to a large twelve metre by three metre full lantern roof above a swimming pool. Everything is custom built.

There are some "stock sizes", which are popular sizes that are, as a result, marginally more cost effective. One of our team will be able to go through these size options to work out the most cost effective solution. We are used to working closely with our customers to find the best product and application. You can view some images of our skylight installations by visiting our gallery.

Our pitched skylights are available in either Ultraframe uPVC or Atlas aluminium and come with our no quibbles 10 year insurance-backed guarantee against everything except accidental damage. All of this is documented in the guarantee documents our customers receive after the installation has been completed.

All of our skylight products are available to see at our showroom, at Millbrook Garden Centre just outside Maidstone (TN12 9BT). We have installed an Atlas aluminium roof on one of our orangeries as well as an UltraSky uPVC lantern roof. That way, you can be sure you are choosing the right product for your property or extension.

Tiled roof conservatory

“We are very pleased with the conservatory from you, all the trades involved were polite and tidy. All mess was minimal and taken away. The quality of the work and the product is of a very high standard. We are most pleased and would not hesitate to recommend you at DWL. Many thanks.”

Mr and Mrs Tubb, Kent.

Lean-to

## Conservatories

In our conservatories, we use the best uPVC, aluminium, timber and timber effect products on the market. We guide you through the whole process from initial design to final installation.

Our conservatories are available in the following materials.

- uPVC
- Aluminium
- Timber
- Timber effect

There are countless designs and everything is tailor made to your property. The basic conservatory designs available are below.

- Edwardian
- Victorian
- Lean-to
- Gable-end
- P-Shaped
- Bespoke designs
- Tiled roof conservatories

We use a combination of the Ultraframe and Atlas systems for our glass roofs and the Guardian warm roof system for our tiled roof conservatories. We can further explain the difference between these products in our showroom, where we have all on show.

### All of our conservatories:

- Are designed with our customers from start to finish. From the initial appointment to the showroom appointment to firm up design, onto the site survey to take final measurements and design right through to the final installation.
- Come as a complete package. We carry out all the planning applications, building, electrical and plumbing work as well as installing the windows, doors and roof.
- Are fitted with any windows and doors from our uPVC, aluminium and timber effect range, with all the features and colours each of those come with.
- Are fitted with the latest anti-sun, solar control or self-cleaning glass in the roof, available in clear, green or blue.
- Can be fitted with a LivinRoom, giving the feel and look of an orangery, for a fraction of the price.
- Are postcode checked for snow load and wind speed. If our customers property is in an area with a high snow load, we will use a reinforced roof for extra strength in the winter months.
- Are sold on the proviso that we remove any existing conservatories and remove all rubbish after the installation.
- Are available with traditional decorative crestings and ball or spike or finials or alternatively with modern low profile cresting and no finial.
- Come with a no quibbles 10 year insurance-backed guarantee on the frames, glass and the building work.

# Orangeries

**In our orangeries, we use the best uPVC, aluminium, timber and timber effect products on the market. We guide you through the whole process from initial design to final installation.**

In the roof or lantern of your orangery we use either an Ultraframe, Atlas or Guardian tiled roof, which will be determined by your requirements. We also colour-match the brickwork in our orangeries to those in our customer's' property.

## All of our orangeries:

- Are designed with our customers from start to finish. From the initial appointment to the showroom appointment to firm up design, onto the site survey to take final measurements and design right through to the final installation.
- Come as a complete package. We carry out all the building, electrical and plumbing work as well as installing the windows, doors and roof.
- Are fitted with any windows and doors from our uPVC, aluminium and timber effect range, with all the features and colours each of those come with.

- Come with roofs that are fitted with the latest anti-sun, solar control or self-cleaning glass in the roof, available in clear, green or blue.
- Are sold on the proviso that we remove any existing conservatories or structures and remove all rubbish after the installation.
- Are available with traditional decorative crestings and ball or spike or finials or alternatively with modern low profile cresting and no finial.
- Come with a no quibbles 10 year insurance-backed guarantee on the frames, glass and the building work.

## Traditional Orangery

Our traditional orangeries distinguish themselves from modern orangeries with their full parapet wall above the windows and doors. Externally, the traditional orangery features a flat roof around the perimeter along with a structural grade aluminium roof, which is capped and clad with low maintenance and thermal uPVC or aluminium cappings and claddings. This translates internally into a deep ceiling around all four sides into which cable runs and lighting can be hidden.

Each Orangery project is totally tailor-made and engineered for the specific post code, calculating the wind and snow loads operating in that area.

Our traditional orangeries roof are perfect for homeowners that want a more grand and sophisticated extension. The roof lets light stream into the room, whilst the brick pillars give the room a more traditional extension feel. The interior height adds further grandeur to this spectacular living space.

## Modern Orangery

Our modern orangeries are incredibly popular. Using the same windows, doors and roofs as we do on our traditional orangeries, the difference between the two is the parapet wall above the windows and doors. The full brick pier columns appeal to many customers who want the feeling of an extension as opposed to a glass conservatory. The windows, doors and roof allow the light to pour in and the brick columns often make our modern orangeries feel like the lightest and most pleasant rooms in the property.

We use the Livin' Room on the inside, giving the internally deep ceiling with downlights to further enhance the feel of an extension.

*"We chose DWL to put up our orangery 15 years ago and have had no issues from the start of the operation to the present day. The service was professional and delivery was timely - we couldn't ask for more. Plus - the orangery still looks great. Highly recommend."*

**Mr Thomas, Kent.**

Traditional Orangery

Modern Orangery

“We came across Loggia when we were looking for something special and a bit more upmarket for some high end new builds of ours. The six Loggias DWL have installed for us to date on various new build plots have all been perfect.”

Clarendon Homes, Kent.

## Loggias

**Based on Italian columned architecture, this product is rapidly gaining popularity and has brought something totally unique to the market.**

‘Loggia’ itself really refers to the aluminium columns used in the Loggia structure. We use a combination of colour matched uPVC, aluminium and timber effect windows and doors to create a beautiful space. In the roof or lantern of our Loggias we use colour-matched Ultraframe or Atlas glass roofs and the Guardian warm roof system for a tiled roof Loggia.

### Loggias:

- Are designed with our customers from start to finish. From the initial appointment to the showroom appointment to firm up design, onto the planning process and site survey to take final measurements and design right through to the final installation.
- Are fantastically thermally efficient, even with slightly better thermal values than brickwork!
- Come as a complete package. We carry out all the building, electrical and plumbing work as well as installing the Loggia columns, windows, doors and roof.
- Have roofs that come in all the same designs as normal conservatories with lean-to, Edwardian, Victorian, gable-ended, P-shaped and bespoke designs to suit any property and budget.

- Are fitted with any windows and doors from our uPVC, aluminium and timber effect range, with all the features and colours each of those come with.
- Are available in grey, white, cream and green as standard and in any RAL colour at a surcharge.
- Come with two column sizes. For a small Loggia structure, it may make sense to choose small Loggia columns to maximise glass and light but for bigger structures, large columns might be the only option.
- Come with the option for non-fluted columns for the contemporary look and fluted columns for the more traditional feel.
- Are available with light fittings, thermal radiators fixed into the corner and a choice of small or large decorative cornice.
- Come with roofs that are fitted with the latest anti-sun, solar control or self-cleaning glass in the roof, available in clear, green or blue.
- Are sold on the proviso that we remove any existing conservatories or structures and remove all rubbish after the installation.
- Are available with traditional decorative crestings and ball or spike or finials or alternatively with modern low profile cresting and no finial.
- Come with a no quibbles 10 year insurance-backed guarantee on the columns, frames, glass and the building work.
- More information on the Loggia can be found on Ultraframe’s website.

# Loggia Prestige and Loggia Premium

## Loggia Prestige

The Loggia Prestige is the entry level Loggia. With the smaller Loggia columns, smaller pelmet, and the smaller cornice (running around the top), this product creates a fantastic-looking space at an entry level price. Costing not too much more than a standard conservatory, many snap up the opportunity for a space like this.

With the option for dwarf walls or full height glazing and the choice between aluminium, uPVC and timber effect windows and French Doors, bi-folding doors or sliding doors, we can truly tailor your Loggia Prestige to your home.

## Loggia Premium

Moving up a notch, the Loggia Premium, with its large Loggia columns, large decorative cornice running all the way around the perimeter of the roof and full depth pelmets with downlights, the Premium is the pinnacle in design terms. With internally plastered columns giving the true feel of an extension and the fantastic thermal qualities of the Premium keeping in the warmth, it is sure to become the most used room in the property.

As with its younger sibling, the Premium is available with full height or glazed columns and a choice of aluminium, uPVC and timber effect windows and doors.

**“We were so pleased when DWL said they could do the glass balustrading on our terrace as well as all of the windows & doors. They packaged us a good deal and we never looked back. Great installation.”**

**Mr and Mrs Smith, London.**

## Balustrading

**Our glass balustrading is a perfect way to finish a terrace or balcony. Everything is custom made and tailored down to the millimeter meaning we can make our balustrading suit any situation.**

The 10mm or 21.5mm thick toughened glass units in our balustrading will stand up to any wind and weight load. It is available in a choice of green, blue, clear or bronze grey. We can also coat the glass with a self-cleaning coating. This is particularly useful when we install Juliette balconies in areas that are not so easy to access.

As standard, the top rails are available in either a rounded handrail or an aerofoil style. We have both available to view at our showroom.

In addition to this, we can also supply the fantastic fully frameless balustrade system, which has no handrail at all and creates a seamless transition to the outdoors.

The aluminium profiles which make up the hand rails and posts are available in the following colours.

- White
- Silver
- Bronze
- Royal chrome

### Why choose our glass balustrading?

- Maintenance free
- Easy to fit
- No glass clamps
- Minimal inline posts required
- No corner posts
- Super strong and tested system
- Curved option available
- Very reasonably priced

"Our loft conversion allowed us to create a lot more space in what was a very cramped room. The French doors and Juliette balcony that DWL installed for us played a big part in the transformation."

Mr Aristidou, London.

Mirror Juliette

## Juliette balconies

Our glazed Juliette balconies are a perfect alternative to iron grill Juliette balconies. They are available in the designs below. The most popular design due to its symmetry is the mirror Juliette option.

- Traditional
- Aeorofoil
- Mirror
- Frameless

### Why choose our Juliette balconies?

- Unobtrusive with small aluminium frames and maximum glass sizes
- No vertical posts
- No cage-like appearance like wrought iron alternatives
- Maintenance free
- Suitable for corrosive locations
- Building regulations compliant
- Load tests and structural calculations
- Self cleaning glass as an optional extra

Traditional Juliette
