

The Modern CAD Viewer

5 reasons Actify SpinFire is the perfect CAD viewing solution for your multi-disciplinary projects across the enterprise.

Actify's revolutionary CAD Viewer, SpinFire is the perfect CAD viewing platform to allow designers, management and engineers to work as a team. Organizations adopt SpinFire for its ease of use and for the professional CAD tools needed to help inspect and communicate design improvements. If you are part of a multidisciplinary design project or quite frankly, are part of any design team, here are five reasons why you should be using SpinFire.

**SPINFIRE IS A PROFESSIONAL
CAD VIEWING APPLICATION
THAT ANYONE
WITHIN THE ORGANISATION
CAN OPERATE.**

Never before have so many people across the enterprise had access to a professional-level desktop CAD application for investigating, analysing and communicating 3D & 2D CAD files. Actify focuses on providing easy to use CAD tools, to remove all technical barriers, allowing anyone to inspect and contribute to a design.

Actify also offers a CAD Viewer that runs in a browser which means that all project members can access, review and communicate 3D design data on any type of computer, tablet or even a phone.

SPINFIRE MANAGES CHANGE REQUESTS.

When working with a large group of people, change management becomes vital. Here's how SpinFire helps simplify the feedback exchange and data management:

Everyone on your team can clearly communicate their feedback most effectively through 'User Views'. A user view captures the part orientation, camera view, part transformations and annotations to detail your feedback. SpinFire effectively captures who added the 'user view' in addition to any updates, additions or changes made by other members of the team, to track change increments as they accumulate.

SPINFIRE IS FEATURE RICH AND USER-FRIENDLY.

SpinFire is designed with an intuitive Graphical User Interface that allows users to quickly learn and begin using the solution with very little effort, even if they never had prior CAD software knowledge. Engineers will be happy with the many features that SpinFire has to offer, while the extended organization will gain access to 3D and 2D CAD data that they never before had access to.

SPINFIRE IS COMPATIBLE

It's likely that customers or design teams may be using several different CAD products. SpinFire Ultimate works well with other CAD systems. You can import a wide variety of common CAD formats with SpinFire Ultimate, which will translate these files into viewable geometry and a neutral format. SpinFire Ultimate leverages industry leading CAD importers. Team members can also import their native CAD data, which can then be easily shared with others in a lightweight .act3D format. This will help users share and communicate new versions of their native CAD data.

SPINFIRE MAKES ENGINEERING DATA MORE ACCESSIBLE.

Sharing your project with extended design teams is easy with SpinFire Ultimate.

SpinFire is able to convert CAD data into a compact, lightweight and neutral format for sharing with internal and external teams.

Information workers within, but not limited to; procurement, management, sales & marketing departments can benefit from

gaining access to more information

contained within a CAD file. For the nature of these job functions and use cases, a cost effective CAD Viewer such as SpinFire

Ultimate would deliver more value to your organisation.

Why SpinFire

SpinFire is the perfect CAD Visualization platform for reviewing and participating in hardware design projects. Now everyone can immediately access professional CAD: Your design team, your partners, your suppliers, everyone. With effective tools to support the communication of engineering type data across the enterprise, your project will evolve faster and feedback can be given and addressed instantaneously. By eliminating cost barriers and resolving common data management problems, your team can now focus on what really matters – the delivery of your project!
