GLASS DESIGNS

Sustainability & Creativity. Glass within Education.

With experience of working within schools and colleges, I enjoy working in partnership with places of education to create a unique learning environment. This tailor made service can offer individual sessions, workshops and one-off commissions.

“fantastic resource and we have a stunning window as a memory...” Simon De Montfort Middle, Worcs.

The level of student involvement can vary, with accessible activities spanning initial research through to design and manufacture. There is also the option to support cross-curricular learning and dimensions if required. Whether the pupils design or help to make the piece, my main priority is that they feel a sense of pride and ownership over the work.

“the children loved working on the window with you...” Tardebidge first, Worcs.

Modern processes can be combined with traditional techniques and there is the option of incorporating ICT through CAD/CAM technology within any piece. This provides an excellent opportunity for pupils to experience how computers are used to aid design and manufacture whilst working with an environmentally friendly and long lasting material.

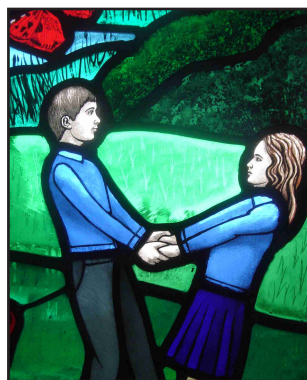

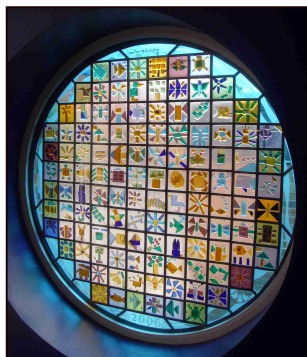

“I really wanted to say a big thankyou, you put in so much time with and for us...” Astwood Bank Primary, Worcs.

Possible outcomes: Windows, panels, coasters, tiles and glass features.

Enterprise and Community participation activities

Techniques used: Fusing, slumping, sandblasting, printing and painting.

Please feel free to contact me for more information or to arrange a visit.

Unit 5A, Canal Wharf, 138 Hanbury Road, Worcs B60 4JZ
