## ***“Success is no Accident”- VINCI (UK) PLC implements Pro-Sapien’s HSEQ Innovate on SharePoint 2013 as their Health, Safety and Environmental Portal.***

**VINCI Construction UK is a national construction and facilities company, part of VINCI, a world leader in construction and civil engineering.**

At local level VINCI regional teams operate throughout the UK, offering a fully-integrated service – from inception, ground investigation and remediation, through to project completion and beyond, to the delivery of operational solutions.

Health & Safety is an area where VINCI is committed to continuous improvement. Through the rigorous management of operations, they help to ensure that their people return home safely and that those visiting or living near their sites are not at risk. Part of their continuous improvement strategy was to implement the HSEQ Innovate software across their regional teams.

Andy Sneddon, VINCI UK Group Health and Safety Director commented, *‘We recognised early on that Pro-Sapien’s HSEQ Innovate portal had a number of key differentiators that made it the preferred choice for VINCI. Our primary objective though was to implement a system that fully addresses the needs of the HSE department’s operational and regulatory processes. The fact that Pro-Sapien’s solution is flexible and can incorporate change as our requirements advance over time was also core to our decision. Pro-Sapien’s experience and technical expertise, combined with their software, delivered an HSEQ portal that met our expectations. As a result we have a robust solution that has removed bureaucracy for end-users, is fit for purpose and tightly integrates with our Microsoft Office and SharePoint environment.’*

Richard Smith, Group Environmental Manager commented, *‘I was extremely impressed with the professionalism of Pro-Sapien in designing, developing and delivering the new environmental portal. I had a clear view of how we wanted the environmental system to work and it was relatively straight forward, through the use of workshops, to provide Pro-Sapien with the material they needed. As a result, VINCI now has a system that captures data simply and effectively. The development and implementation process has gone really well. It was great to see the collaboration of the VINCI IT Team and Pro-Sapien throughout the project. There were some tight deadlines and Pro-Sapien and my colleagues in IT ensured the timely and effective launch. The new system will improve environmental reporting significantly.’*

VINCI Project Manager Nigel Lassman stated, *‘A good working relationship with any third party is key to a successful delivery. Working with Pro-Sapien has been a testament to this; their understanding of the technology is second to none which means that they came up with elegant, pragmatic solutions to our business requirements. Equally important is the responsiveness of the delivery team and Pro-Sapien demonstrated their commitment when working with VINCI and our other IT partners.’*

Nigel also went on to say, *'The data warehouse that underpins the HSEQ Innovate software enables the HSE team to drill down into the data captured within the system and provide tailored views of the data depending on audience type. As well as providing high level key performance indicator dashboards, I can create reports myself and analyse using intuitive tools such as PerformancePoint, rather than manually pulling information together or relying on the IT team to produce reports.'*

Ben Paddick, IT Director at VINCI stated, *'VINCI have made a strategic investment in SharePoint and as such there was added importance that the HSEQ Innovate implementation went well. We were keen to implement SharePoint 2013 and Pro-Sapien were able to tie in their 2013 release of HSEQ Innovate with our timescales. The HSEQ Innovate application makes clever use of the underlying features of SharePoint and closely integrates into Microsoft Office. Specific views of the data have been created based on the audience type which is all driven centrally from our Active Directory. The HSEQ innovate software is seamlessly integrated with our intranet. Together we achieved the objectives of the project as well as aiding user adoption and showcasing the platform.'*

Murray Ferguson, Commercial Director of Pro-Sapien said, *'By investing in Pro-Sapien's software, organisations like VINCI see major productivity and compliance management benefits that enable greater transparency, all of which assist when fulfilling regulatory requirements and internal quality standards. In this project, we implemented mobile forms that can be filled in anonymously (by site workers and the public alike) to report near misses and non-conformance.*

*By scanning QR codes on the VINCI site perimeter hoardings, an individual can fill in a form to highlight areas of concern to the HSE team. As the forms are browser based, any device including iPads, smart phones, BlackBerry etc. can be used. This is a great example of flexible innovative technology. VINCI's approach here demonstrates the bold and progressive commitment they have for the safety of their employees, contractors, and the general public.'*

### **About Pro-Sapien**

We are software development experts that offer a number of 'Portals for Compliance' products built on Microsoft SharePoint, various business intelligence tools and cutting-edge mobile technologies. The team have years of experience working with the UK's largest companies across a number of sectors including Engineering, Oil & Gas, Finance and Logistics.

Our flagship product, HSEQ Innovate has been advocated by some of the world's largest companies and deployed in Europe, North America and the Middle East. For more information on Pro-Sapien or to arrange a HSEQ Innovate demonstration contact the team on:
