

# CROSS COUNTRY MANUFACTURING

engineered for today. built for a lifetime.

*SIDE DUMP - 490SD*

## DARLING SONS INTL.

Driven by the demands of relentless construction sites and unyielding oil fields, Cross Country has developed what is, by all standards, the industry's toughest, most durable side dump trailer.

Every Cross Country is the result of over 20 years of sacrifice and dedication to building "The Best". Meticulous attention to detail, in every product line, has produced a trailer that is a tool to be used rather than just a trailer to be pulled.

A wide stance and low center of gravity provide the perfect platform for the Cross Country side-dump trailer. We incorporate hundreds of engineering features to give you the toughest, most ergonomic trailer in North America.

For a fast, reliable dumping process, we utilize two 6" fast-acting cylinders fed by a rotary valve. This unique valve maintains a consistent, metered hydraulic flow to both cylinders, preventing tub flex and giving you longer trailer life.

**CROSS COUNTRY MANUFACTURING**

engineered for today. built for a lifetime.

// 24.5 cubic yards

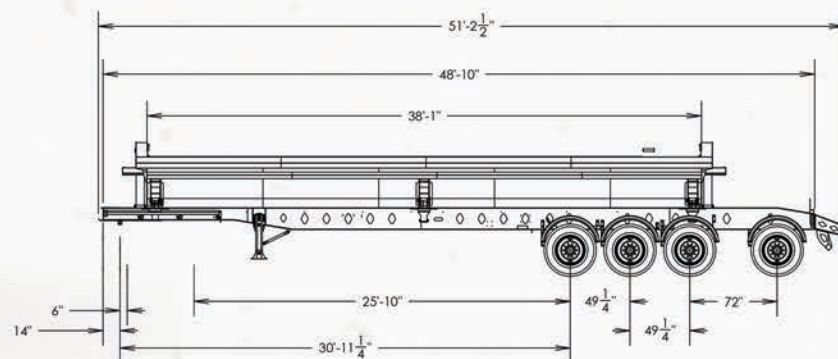

### Features

// Super-wide 50" QT100 fabricated chassis for greater stability and lower center of gravity // High strength CAD modeled box design for minimal stress points // PPG™ Delfleet Essential primer & paint // Truck-Lite™ LED lighting w/ sealed wiring harness // Fast acting cylinders for a quick cycle time //

### Darling Sons Spec

// ¼" Hardox™ 450 tub // Rear lift axle // Super Single Accuride XP wheels // Roll-Rite™ side roll tarp // Belting style front fenders // Black plastic ½ moon fenders // Bolt-on pushblock with under-ride bumper // In cab control box //

**SIDE DUMP - 490SD**

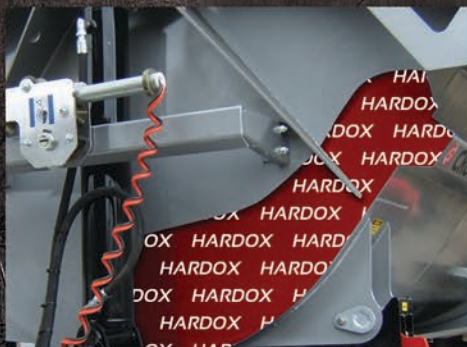

// No matter how difficult or demanding the terrain, Cross Country side dump trailers are built to get your job done – on time, every time.

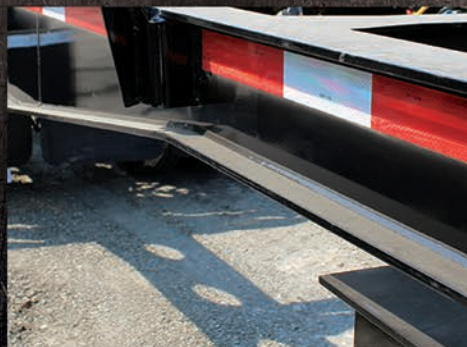

Rotary valve guarantees an even movement of the box

Made with ¼" genuine Hardox™ 450

Industry's strongest chassis - built to optimize strength and weight

Notched cross members allows lower box height for greater stability
