

Case Study

Project: Electrical Wholesale Trade Counter **Location:** Derbyshire

sde worked closely with the client to develop there existing there trade counter format. Being one of the largest direct and online supplier of electrical parts and accessories, we are constantly tasked with looking at ways to improve the practicality and efficiency of these counter units.

Works included within a typical installation of the standard trade counter format include:

- Trade counter installation
- Stud partition walls inc decorating
- General building modifications
- New shop front
- Mezzanine floor & fire protection
- Shelving
- Kitchen & Toilet refurbishment

Given our clients accelerated plans and continual development of the trade counter program, the level of support and flexibility offered by the team at sde was key to us delivering this project on program and to budget.
