

HESTER WAY PARTNERSHIP RESOURCE CENTRE

Proposed Multi Use Games Area

Sutcliffe Noise Reduction System

Noise Damping System
Each panel is isolated with a specially designed rubber moulding, to minimise vibration and noise transfer.

Built In Adjustability
Each panel can be altered to allow for gradients using a slotted fixing system

Fence Panel Finishing
All lower panels have rubber safety edging to protect users.

Mesh
Reinforced mesh design to absorb impact. Available in a range of colours

Posts
Heavy duty pre galvanised support posts

3.0m Wide Double Leaf Pedestrian/Vehicle Gate

Duex 868 fencing is principally designed for a sports environment. The configuration of double 8mm (nom.) horizontal wires sandwiching a 6mm (nom.) vertical wire is ideal for ball rebound and offers a robust perimeter solution. A full length lacing strap secures the panel to an RHS post giving an assured fixing for either sports, play or general perimeter applications.

Duex Rebound has additional 8mm (nom.) diameter wires to the bottom 1.2mtr section of the Duex® 868 panels, making the Rebound system extremely rigid and ideal for multi-use games area. These extra wires give smaller apertures of 50 x 66mm, allowing a much more robust rigid surface which provides a more aesthetically pleasing, practical and longer lasting solution.

Fully Closed Football & Basketball Goals

3.03m High Side & End Panels

Football & Basketball Thermoplastic line markings to new tarmac

Basketball
