

SUPPORTING THE OIL INDUSTRY

Case Study : Oil & Gas Production

Background

Conoco Phillips (CP) is one of the world's largest international integrated energy companies with operations in the Bayu Undan field in the Timor Sea between Australia and East Timor.

Opportunity

CP required a reliable communications solution for their remote operations, linking them to their operations in Perth, Darwin and Dili, via dedicated links.

Results

SpeedCast delivered a pooled bandwidth solution for CP to share across multiple sites, to optimize utilization and performance.

Service of up to 2 Mbps is shared between the sites.

CP expanded the service to include other vessels taking part in the project.
