

Created in 1986 and settled in Provence since 2006, our company IES LABO is specialized in the production and distribution of raw materials for cosmetics. Throughout time we have acquired a great experience in this sector and today we can propose to you liquid ingredients formulated with plants.

We distribute a wide range of vegetables oils coming from different countries and export our products all over the world. The direct and privileged relationship between IES LABO and rose hip, jojoba, laurel berry, calophyllum, raspberry oils and organic glycerine producers allows us to be a leader on these markets.

IES LABO has been an early pioneer for organic products. It was certified organic producer and distributor by ECOCERT France in 1995. Since then, we have received others certifications like NOP (USA), NATRUE (Germany), COSMOS (Europe), COSMEBIO (France), CUCERT (India) which open the doors to the international trades for us.

We propose to you standard ranges of herbals oils, flower water, hydroglycerin and hydroglycolic extracts, organics or conventional and we also can produce for you customized extracts. With plants, fruits, roots, dry or fresh, from kilogram to ton, IES LABO responses the needs and expectations of its customers with the biggest seriousness.

Our organic glycerine market, from karanja, is in agreement with the company values. This production does not divert lands necessary for subsistence crops towards an industrial use. It does not divert either from the food sector oil necessary for the food of the population (soya, groundnut). It is necessary to remind that since the food crisis of 2008, India has forbidden any export of vegetable food oil.

Very involved in Quality management process, IES LABO elaborated a quality plan and realizes its productions following the Good Practices of Manufacturing (GPM) requirements. We are also following the REACH requirements.

IES LABO is an active member in cosmetics. It's a part of competitiveness poles (pole PASS) and associations like COSMED, COSMEBIO or UNITIS to be constantly evolving, statutory and technical.
