

## Hinged Steel Doorset

## Security & Fire Rated Pedestrian Access Doors

Hinged Steel Doorsets are a cost-effective pedestrian access door for security and fire protection applications with durability and aesthetics in residential, commercial and industrial environments.

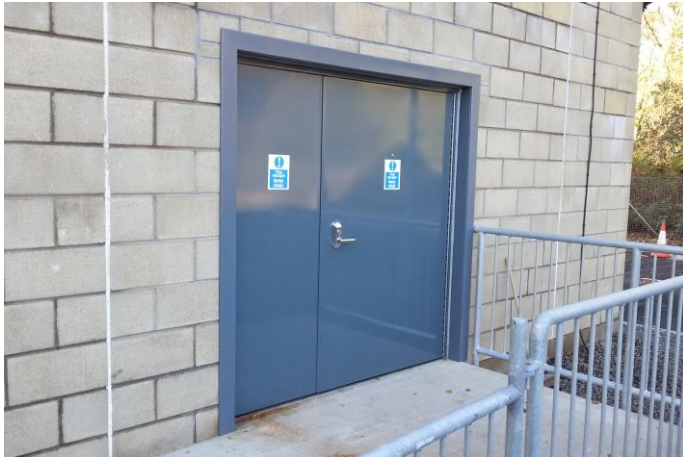

We are an authorised installer of Hinged Steel Doorsets from leading trade suppliers and manufacturers who use only the industry's best components while avoiding inferior parts from inferior suppliers.

## The industry's best at a competitive price

The doorleaves are constructed from corrosion resistant Zintec/Aluzinc sheets, lockformed together by bonding skins around a rigid core, using a no-weld construction and infilled with self-supporting resin-impregnated honeycomb core as standard, with optional Mineral Wool, Polyurethane or solid timber.

The doorframe is folded from corrosion resistant Zintec/Aluzinc, in a screw and tab construction with 4 adjustable fixing feet per jamb, variable sub-frame and 4 dog-bolt hinges as standard.

An extensive range of colours and finishes are available including polyester powder coating from standard, non-standard and marine grade range, PVC laminate, Woodgrain PVC laminate, stainless steel or unfinished for site finishing.

## Hugh range of options

Options include mortice locks & latches, mortice multi-point locking, electric locking & access control, emergency & panic escape hardware, door closers, vision & louvre panels.

Fire rated doorsets are designed to protect personnel & property from the spread of flames & smoke and offer substantial benefits over comparable timber doors in strength, durability & security. The range has been tested to BS 476 Parts 20 & 22, BS EN 1634 and holds CERTIFIRE certification.

## Technical Sales & Support

Every enquiry is handled by our dedicated technical sales team who are focussed on providing the best and most cost effective solutions quickly and efficiently.

For every order we appoint a job manager who arranges all material, engineer and Health & Safety resources and scheduling required to carry out the work on time and on budget. Our in house team handle all calls and emails to ensure the smooth running of every job from first contact to completion.

A site meeting with the appointed job manager is held to review the work, confirm site details, to determine site restrictions and hazards, and plan dates for the work.

Our family of long serving and motivated site engineers provide a reliable service delivery of confidence and attention to detail.

Our in-house fabrication facility is also capable of handling all Hinged Steel Doorset repairs and upgrades from any manufacturer, including replacement locks, closers, emergency exit devices, hinges, handles, all hardware, door entry systems and door automation, often at short notice.
