

Mykhaylo Kostyuk, Combi Lift  
Bosun

How to load in shallow waters?  
**We raise the limits.**

**"Papenburg" submerges at Meyer Werft, February 2016**  
The "Papenburg" has an integrated pontoon which can be floated out, allowing us to load in water less than two metres deep. When floated in, the pontoon serves as the main deck of the barge carrier and can be loaded from three sides in adequate water levels. However and wherever we load – we always sail without restrictions.
