

A room for all seasons

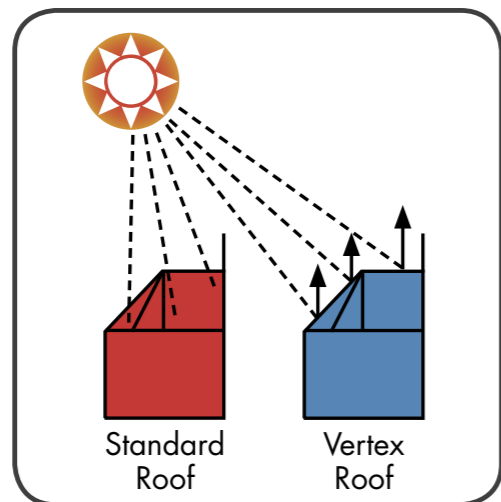

## BEAUTIFULLY DESIGNED

Cool in summer and warm in winter, all the look of a traditional extension.

A conservatory is a wonderful way to enhance your home and your lifestyle. A beautiful room that connects the inside and outside and lets you enjoy the glories of your garden all year round.

But have you considered how you will keep your conservatory warm in winter and cool in summer? A traditionally polycarbonate conservatory roof can mean the beautiful new addition to your home is too cold in winter and too hot in summer. While heating and blinds can help solve these problems, there is a better solution.

By choosing a conservatory with a Vertex tile effect roof, you get all the benefits of a conservatory with none of the downsides. What's more, because it has all the looks of a traditional extension, it will be a seamless addition to your home.

Read on to find out more about how a conservatory with a Vertex roof can give you so much more than you thought a conservatory ever could.

## BEAUTIFULLY LIGHT

One of the biggest joys of a conservatory is the beautifully light filled space it creates. With its white interior ceiling, a conservatory with a Vertex tile effect roof gives you exactly that feeling of light and space. What's more, your Vertex roof can also be partially glazed to allow shafts of light to enhance your room.

Having a Vertex roof also means you won't need to install complex ceiling blinds to help protect you and your conservatory from the sun's glare and heat in the summer months. As well as giving you a room that's pleasantly comfortable to be in all year round, a conservatory with a Vertex roof also means there's no need to worry about dated, faded or discoloured fabrics that could spoil the look of your conservatory in years to come.

## BEAUTIFULLY PRACTICAL

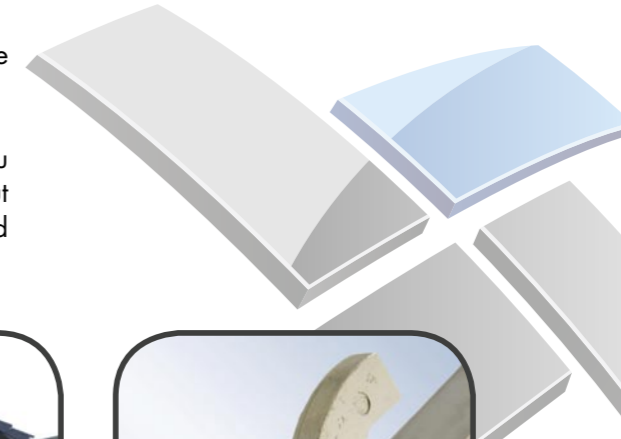

A conservatory is a room that will make you fall in love with your home all over again. But despite all the ways a conservatory will enhance your home and your lifestyle, there are still practicalities to consider. And a conservatory with a Vertex roof has got all those practicalities covered.

The windows and doors of your conservatory all comply with the latest energy efficiency legislation – they can even be A rated for maximum energy efficiency – minimising your carbon footprint and keeping your energy costs down.

Security is taken care of too, with high security hardware locking throughout.

And when it comes to installing your conservatory, you might like to know that the tiles of the Vertex roof can be cut into the tile of your existing roof, creating a seamless and simple finish.

## BEAUTIFULLY STRONG

We're told that extremes of weather are likely to become more frequent. So it's more important than ever to make sure any addition to your home can withstand the most severe conditions. A conservatory with a Vertex roof has several advantages that will give you the peace of mind you need.

## BEAUTIFULLY STRONG

It has an aluminium structure, giving it inherent strength and durability. It has been extensively tested in Scandinavia under extreme weather conditions so we know it will withstand heavy snowfall. And there's no need to worry about the guttering either: it's integral to the roof, so you can be confident it won't fall off if it's weighed down with snow.

## BEAUTIFULLY FLEXIBLE

A conservatory with a Vertex roof gives you all the advantages of a traditional extension and all the flexibility of a conservatory.

The choice of roof tile colours means you can select the colour that matches the rest of your home's roof, creating a seamless finish.

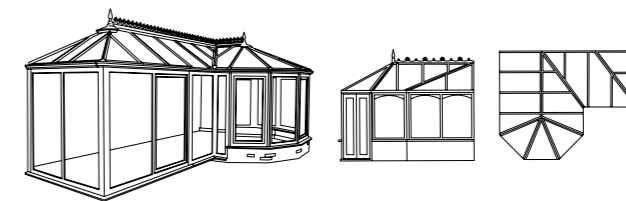

**Before**

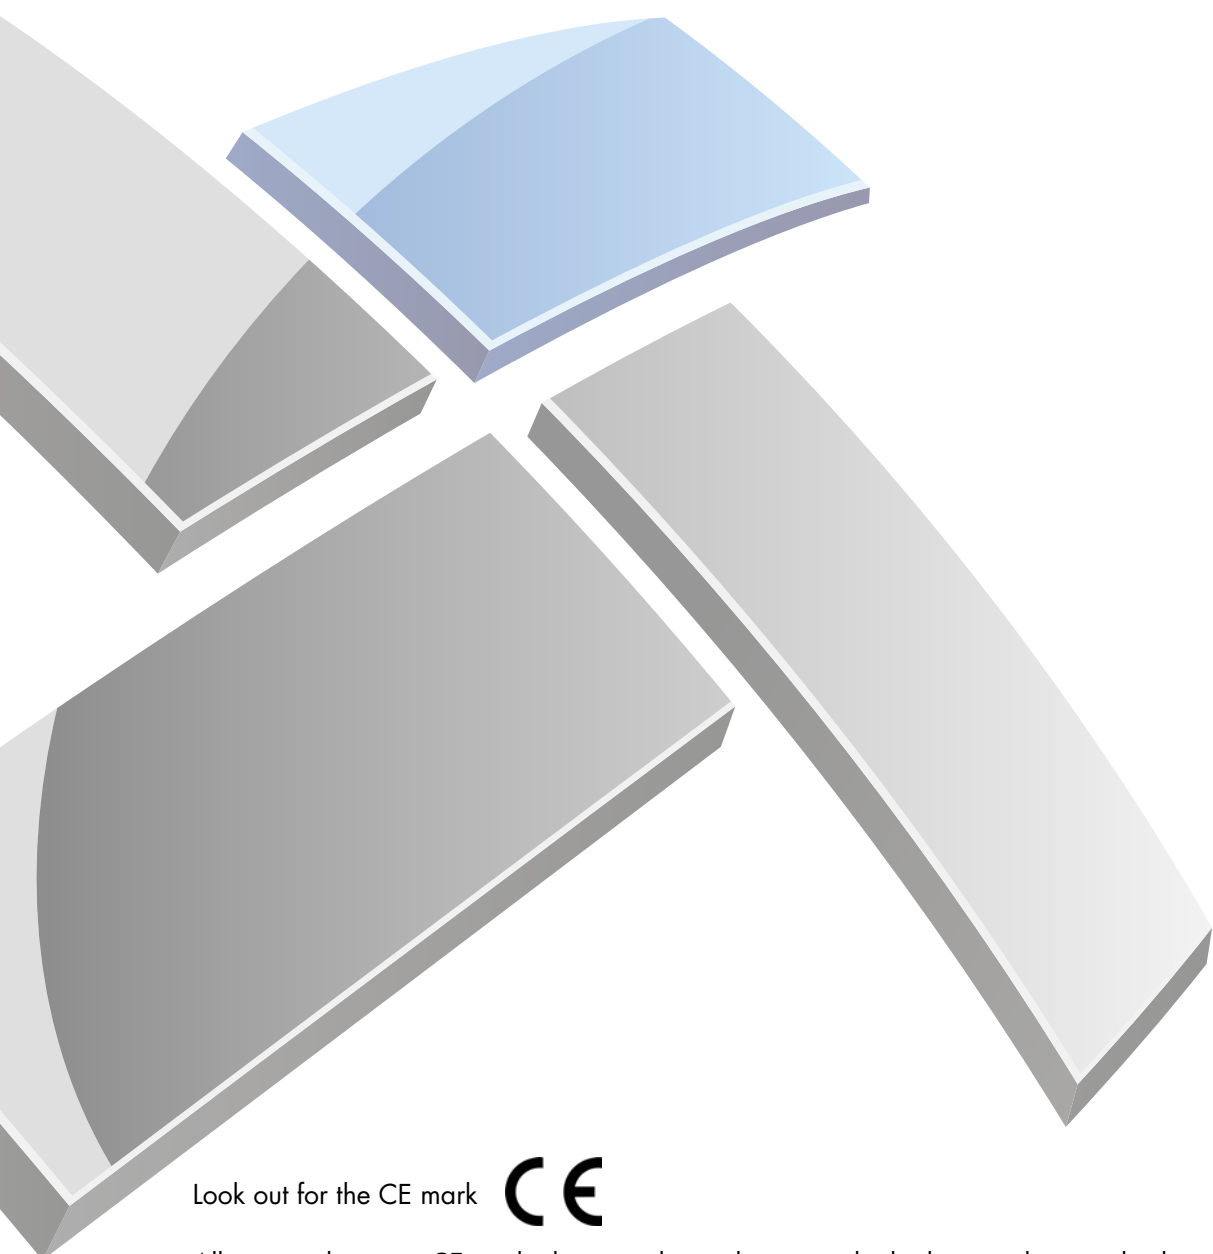

You can choose from Victorian, Edwardian or P shaped designs, so you can create a style that suits your home.

And just because you've already had your conservatory installed doesn't mean you can't enjoy the benefits of a Vertex roof. A Vertex roof can be retro-fitted onto your existing conservatory, giving you all the benefits you always dreamed your conservatory would have.

**After**

Look out for the CE mark **CE**

All our products are CE marked, so you know they meet the highest quality standards.

Ask to see our ID card.

Our ID card is government-backed recognition that we meet Minimum Technical Competences. It's your reassurance that we've got knowledge of Building Regulations and British Standards, we undertake regular training and development and we're audited once every three years to ensure we're still meeting the required standards.
