

Apache Automated Standards Compliance

SPECIFICATION

- Apache HTTP Server version 2.2 [2.4 under development]
- Platforms: Solaris, AIX, HP-UX, Red Hat (RHEL/CentOS), SuSE (SLES), Ubuntu and Debian.
- On-premise, remote, SaaS or SOC
- Simple and quick installation with a small footprint
- Standards: Center for Internet Security, DoD Security Technical Implementation Guide
- Baselineing: be alerted to unexpected or unauthorised configuration changes
- Uses latest standards. Updated regularly
- Related installation issues can be assessed using companion plugins
- Fully automated: self-discovery, push button operation, scheduled scanning

About Assuria

Assuria is used by central government agencies, financial services companies, local authorities, education organisations and other commercial organisations in more than 30 countries worldwide. Assuria Auditor forms a critical element of the IT security infrastructure for some of the largest organisations in the world.

Assuria's award winning suite of security tools has now been enhanced to include the **Apache HTTP Server**.

CyberSense Apache Scanner examines your Apache web server and – using its knowledge base of known vulnerabilities, control configurations and best practice information – will **detect and report on security issues** in the configuration files and installation.

Covering **437 benchmarks** from standards organisations like CIS and STIG, this fully automated service makes it quick and easy to **assess web server compliance** against these standards and

provides a cost effective means for **boards to gauge their exposure to security risks** and satisfy internal and external auditors.

It takes **minutes to run an audit** and can be used by security professionals or neophytes alike due to its comprehensive reporting: it **shows** the issue, **describes** the vulnerability and **explains** the remediation.

Security professionals can **increase their productivity** and companies can **reduce the cost** of expensive security experts.
