Low cost, attractive and maintenance free ELECTRIC HEATING INFRARED PANELS

What is infrared?

Infrared energy is given off by the sun. It is the warmth we feel soaking into our body on a chilly Spring day. Warmth which can be felt through cold air.

Infrared energy travels through air and only turns to heat on touching a person or surface.

Our heaters use a very specific range of far infrared to be effective, natural and comfortable to the human body whilst using little energy.

Anywhere

Easily installed by your own electrician to one room or the whole house or workplace.

Any Style

We offer a huge range of finishes, from plain white to ceramic, polished glass or mirror surface. Disguise your heater and make it a central feature of a room with a personal photo printed on to the surface!

Any Place

We can create the right solution for your space and budget. Infrared heating is energy efficient and can help lower your running costs.

Infrared heating warms people and objects directly; these then give off warmth to heat the air, creating a cosy and comfortable home, whilst using less energy.
