Accredited by

## SCS Group

We specialise in building automation, fire safety, ventilation and process control, with in-house control manufacture and dedicated project teams.

Calling on this expertise, we have created a service and maintenance division managed by people who understand how control systems from the leading names in building technology and automation – including Trend, Schneider and Siemens – work in the real world.

With, for example, proper maintenance of smoke safety systems a legal requirement of building owners/managers, it makes sense to turn to the experts when selecting your service partner. We offer software updates, remote-access maintenance and scheduled site inspections.

“ We work with facilities managers on BMS, smoke control and passive ventilation systems, calling on over 20 years of experience to give real peace of mind.

**Allan Meek** *Managing Director*

SCS performed brilliantly once again... they offer industry leading expertise with truly exceptional service.

Robert Dann *Fläkt Woods*

## Software updates, remote monitoring & maintenance

Who better to take care of your investment than the people who designed and installed it?

Post-commissioning, we're the most cost-effective way to ensure your system continues to operate effectively in the long term. In addition, helping you stay ahead of the game is all part of our offer; adapting to changing demands and taking advantage of advances in technology.

The peace of mind we offer means there is no risk of fine or prosecution for failing to comply with Regulatory Reform (Fire Safety) Order 2005, and that your building will stay safe and efficient for years to come.

- Latest software updates to control units
- Remote maintenance and monitoring available
- Whole-system service checks integrated elements
- Regulatory compliance guaranteed
- Service contracts available for all SCS projects
- Maintenance scheduled around you
- Emergency call out available
- All relevant certification supplied
- Advice on latest technology and services
- BMS, smoke control systems and more

“SCS Group not only reduced costs but cut installation time with an entirely integrated system.

Derek Culver *Essex Services Group*

## Benefit from our experience

You'll find our systems in thousands of buildings nationwide and we have a reputation for technical excellence, quality and collaboration.

During any smoke control, BMS or passive ventilation project, compliance is always a major concern. This is where SCS Group shines – British Standards, H&S, RRO etc – we ensure everything's covered.

Crucially, our fire safety expertise means we are uniquely placed to guarantee projects are compliant with all building regulations and that building users are fully protected in the event of a fire. It simply makes sense to enjoy our ongoing support.

“ We found their remote service package and software updates to be by far the most cost-effective solution after the job was commissioned, and it's certainly something we'll go for on all future projects.
