

# ANALYTICS

Real-time insights  
from across your organization

Rivo Analytics delivers powerful and flexible reports and charts to help you understand what's driving current performance, dissect past performance and spot emerging trends for the future. Get real-time insights using data from Rivo applications and third party systems, to make sure you're always well informed.

#### Rivo will help you:

- ✔ **Create configurable dashboards and charts**
- ✔ **Visualize data exactly as you want it**
- ✔ **Use fewer, more powerful charts**
- ✔ **Collaborate, annotate, share and export charts**
- ✔ **Drill down and analyze current and historical data**
- ✔ **Handle Big Data collected in real time environments**

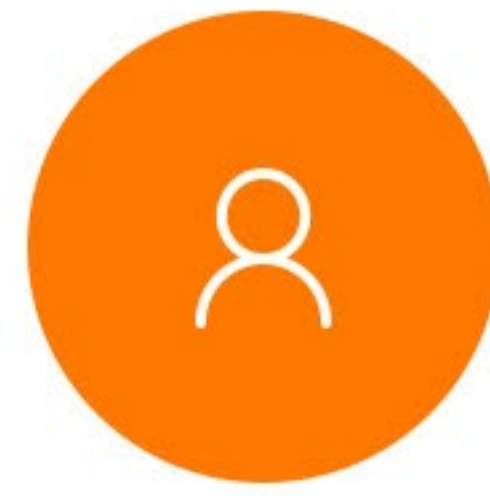

*We have to intelligently use the information and knowledge we have to manage our potential risks and our challenging targets and safety standards. As we scale our global operations we need a solution that can manage that risk and scale with us without us being concerned about infrastructure or usability. Rivo does this for us... across our global operations.*

**Michael Sinclair Williams**, Group Director of Health, Safety & Environmental, Keller

### Charts that are easy to interpret

Even new users are quickly able to get to grips with your business data in Rivo. Our charts are so user-friendly you can even add handy shortcut buttons to return to the original chart (after you've edited it) or export the chart.

### View any data, any way you want to

Rivo works with your business data, regardless of the source or format. Slice and dice the data as you see fit, and present it at the right level of granularity for you. For example, you can view your data at a local, national, global, team or functional level.

*One of the major benefits of the Rivo system is the speed with which we can identify accident, incident and near miss trends. We're now able to plan our resources and pinpoint the areas where we can maximize improvement.*

**Glenn Davies**, Director of Quality, Health, Safety & Environmental, Veolia

### Powerful, flexible charts

In some EHS or Risk applications you need dozens of different report templates to create the charts you need – just finding the right report template is a challenge. Rivo helps you escape all that hassle by providing far fewer yet far more flexible and configurable reports.

### Collaborate, annotate, share and export

Charts in Rivo Analytics can be annotated and shared across your organisation for collaboration or escalation. You can also export your charts to Microsoft Excel for use in reports.

### Compelling data visualization

We want your data to make for compelling viewing, so we built visualization tools like geo-mapping into our app. You can also add risk event records and perform trend analysis in real time, and then share the results.

### Big & Little Data

Rivo has been developed to help you collect data in real time from any source, so you can make up to the minute business decisions whether you're collecting a few data-points every day, or several thousand an hour.

#### Our apps are built for performance:

- ✔ **100% uptime and central secure cloud storage of your data**
- ✔ **Multi-platform support (including mobile) so you can analyze data anywhere**
- ✔ **24/7 total support by phone or email as standard, so we're always here to help**

### Drill down and analyze

Rivo provides dynamic drill functionality within our charts so you can figure out what's driving a trend or home in on a particular time period, geography or division without switching to a different report.

### Insightful dashboards

Rivo allows you to create and configure compelling dashboards so all your key metrics, whether they're from one Rivo application or multiple applications, are available on one screen.

# About Rivo

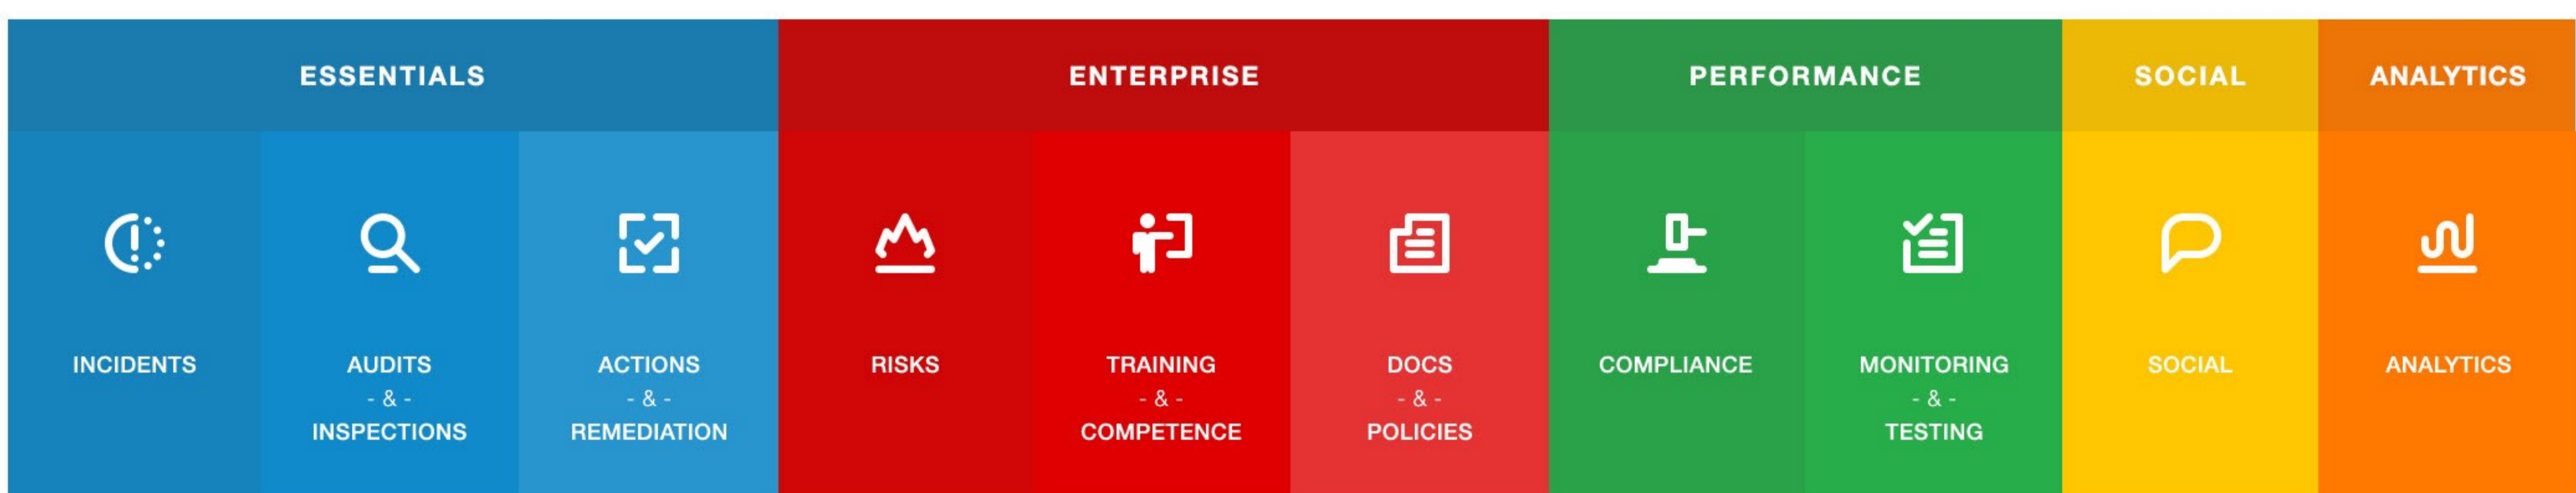

At Rivo, we've built market leading applications that transform how EHS and risk is managed. No matter the size of your organization, how many sites you have, or where they're located, our apps will help you automate repeatable tasks, engage your employees and deliver razor sharp insight. We have over 180 clients across 86 countries, and our apps help them protect people, assets, environment and profits in their companies.

Rivo is recognized in the Gartner Magic Quadrant for Operational Risk Management, the Gartner Magic Quadrant for Environmental, Health and Safety Management Systems and is a Red Herring Top 100 Winner for disruptive software.

Analytics is just 1 of our 10 applications. All our apps work seamlessly with each other to help you build the most effective EHS platform for your organization.
