

## Focus Attendance Board

### TRAFFIC LIGHTS

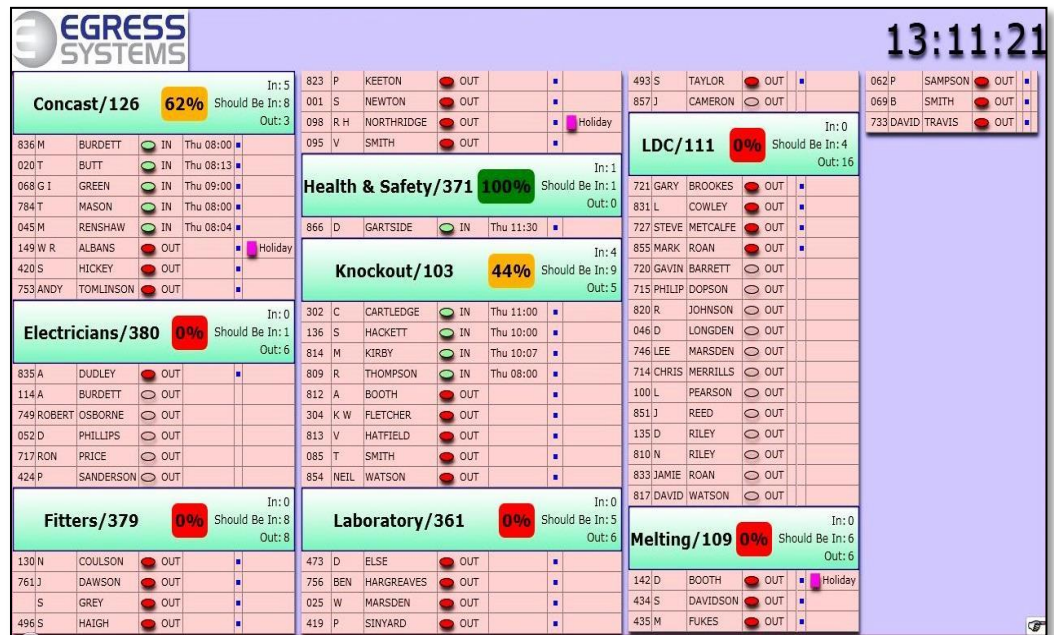

Configure the Attendance Board to highlight shifts falling below expected attendance levels using the 'Red, Amber, Green' traffic light system. You configure the percentage of attendance each colour represents. Ideal for identifying 'at a glance' where additional resource needs to be called in. Save money by pulling resources from well-staffed areas into those falling short avoiding lost time and expensive bills to temping agencies.

### ROLLING SHIFTS

Just like a railway departure board the FAB refreshes regularly to show the shifts in progress, recently started, and those about to start to give you an up to the minute rolling picture of attendance throughout the day and night.

### VITAL INFORMATION

Display up to 14 different pieces of information for each employee including their actual and expected start times, clocked and scheduled cost centres, absence reason and more.

The Focus Attendance Board (FAB) provides an accurate picture of current attendance at your organisation. A highly configurable browser based module, the FAB is available as a cost effective add-on to your **Focus Time & Attendance** system.

The FAB is a powerful tool providing attendance information in a wide variety of different contexts:

- On a large monitor in your reception or factory floor
- On the receptionist's desktop for visitor enquiries
- On the duty manager's laptop to track arrivals
- On your staff agency liaison manager's PC
- Business wide for identifying colleague availability

And because multiple screen configurations can be generated you can display different information to all these people simultaneously.

Use the Attendance Board to find out who has clocked in on which shift, who is late or has clocked out early, why an employee is absent or when a shift is scheduled to end. Importantly for a large or multi-site organisation you can identify where staff are.

Why not set-up different displays for each site, agency, department or cost centre? Personalise the FAB for your organisation with your logo, preferred colours, font styles and size.

Filter each display as you require, deciding the groups, cost centres and shifts you desire to see. Once created different display configurations can be switched between on each display device.
