WeatherLock[®] Specialty Tile and Metal adds self-adhered selvage edge side lap

Dear Valued Customer,

At Owens Corning Roofing and Asphalt, LLC we pride ourselves on producing products that meet the performance and handling needs of our customers.

In January of 2017, we will begin producing and shipping WeatherLock[®] Specialty Tile & Metal underlayment with a newly enhanced feature: a self-adhered selvage edge side lap. Driving enhanced performance by improving the quality of the adhesion at the side lap will be favorably received by your customers.

The sticky selvage side lap will have a release film on it. This release film must be removed before installing the succeeding course. Instructions on the box will reflect this change. **This new sticky selvage edge product will be mixable with the current WeatherLock[®] Specialty Tile & Metal underlayment.** All other attributes and associated code approvals will remain the same. As such, **this transition will be managed as a running change as current inventory is sold through.**

Product description: WeatherLock[®] Specialty Tile and Metal - 66.7'

Product enhancement: New self-adhered selvage edge side lap

Material Code: 788771 (749921 pre- 8/1/2016) does not change.
