

Manchester Square W1

Another installation by Calibre in a stunning office building just off Oxford Street.

We designed and fitted a Daikin 3-pipe VRV system serving multiple offices, using concealed ducted, chassis type and wall mounted units as required. Grilles and diffusers were carefully selected to suit the interior design and ensure correct air flow patterns with low sound levels

The Daikin I-Touch control is integrated with the wet-heating system via Coolmaster ThermoPad interfaces to ensure excellent comfort levels and avoid conflict. ►

Manchester Square W1

► The condenser had to be built in-situ in a narrow lightwell, and is acoustically encased to comply with Westminster Council's strict planning guidelines.

Our client is thrilled with the powerful quiet performance of their new VRV system, and has signed up to a long-term maintenance program with Calibre to ensure continuity of the 7-year warranty.
