The 21st Century Mainframe

Agenda

- Who are we?
- Introducing the 21st Century Mainframe
 - Mainframe 101
 - New stuff
 - Cool stuff
- Managing the 21st Century Mainframe
 - Scheduling
 - Automation
 - Storage

Who Are We?

- Founded in 1996, privately owned with 3 controlling share holders:
 - Julie-Ann Williams
 - Craig Warren
 - Martin Underwood
- Specialists in providing services that support an efficient and secure Systems z environment
- Highly skilled consultants with decades of experience in many System z related disciplines

millennia...

Who Are We?

- Services:

System programming, z/OS Network Management, Storage Management, TWS, zCloud, Automation and Enterprise Security, Compliance & Audit

Training & Education

Partners & Product Support

- Contracts in increments of as little as 1-hour, or to a fixed price statement of work
- Our mission is to integrate with and enhance the skills of your existing team

millennia...

z/OS Training & Education

- Virtually - via webcast
- In-house at your office, or dedicated training centres
- Customisable classes to suit specific customer needs & requirements
- z/OS courses in:
z/Systems Programming, z/OS & z/VM, z/OS Comms, Parallel Sysplexes, DB2 & IMS, CICS, Tivoli, ISV Specific Partner Courses from CA, Vanguard, IBM and more
- Some in conjunction with Verhoef Training

millennia...

Introducing the 21st Century Mainframe

- Mainframe 101
- New stuff
- Cool stuff

NASA used
mainframes

Jets use IMS

Desert Storm
used a 4381

ATMs use CICS

millennia...

Mainframe 101

- Not **JUST** used in Finance!

All use mainframes every single day!

millennia...

Mainframe 101

- z/Auditing Essentials Volume 1

IBM first announced MVS as the operating system to run its “big iron” way back in April 1964. In the 49 years since, it has morphed into z/OS running in increasingly complex configurations on System z with the very latest zEnterprise hardware. The platform has bucked the “Technological Discontinuity” trend identified in the Stages Theory of Computer Growth, described in an early Harvard Review article. It has done this by continually evolving to serve Business better.

...

The System z environment is becoming increasingly complex (with five different GA operating systems available currently and more in the pipeline) and critical to Business (some 80% of the world’s business data lives behind a mainframe). But there are some damaging myths that surround it at the moment.

Mainframe 101

- Myth 1
 - They are old technology and nobody uses them anymore
- Truth 1
 - Sure the mainframe will be celebrating its 50th birthday next year
 - The car is even older technology but no one believes that a Model T Ford is the same beast as a Subaru Imprezza!
 - Today's mainframe is exponentially faster, bigger and better than the 1964 version
 - 96 of the world's top 100 banks, 23 of the 25 top US retailers, and 9 out of 10 of the world's largest insurance companies run System z
 - 71% of global Fortune 500 companies are System z clients
 - 9 of the top 10 global life and health insurance providers use System z
 - Mainframes process roughly 30 billion business transactions per day
 - including most major credit card transactions and stock trades, money transfers, manufacturing processes, and ERP systems

millennia...

Mainframe 101

- Myth 2
 - They only run legacy applications
- Truth 2
 - TCP/IP was rewritten in 1997 to allow out of the box communication
 - Unix Systems Services (OMVS) around the same time
 - CICS Transaction Gateway
 - WebSphere Application Server
 - Domino
 - Java
 - Linux on z since 2000
 - Email
 - Web enablement

leg-a-cy
/'legəsē/

Noun

An amount of money or property left to someone in a will.

Adjective

Denoting software or hardware that has been superseded but is difficult to replace because of its wide use.

Synonyms

Heritage, bequest, inheritance, patrimony

Mainframe 101

- Myth 3
 - They are really expensive
- Truth 3
 - Initial outlay *IS* more than a Windows server
 - Total Cost of Ownership is another matter
 - The mainframe delivers:
 - higher utilization
 - lower overheads
 - lowest total cost-per-user of any platform

Mainframe 101

- Myth 4
 - All the people who know how to run them are dead!
- Truth 4
 - Erm, do I really have to address that one?
 - OK, I will!
 - Yes, classic mainframe personnel **ARE** getting older but...
 - IBM Academic Initiative
 - University of Canberra
 - GSE UK Conference
 - 101 Sessions in all streams
 - Students invited
 - Our real legacy must be to make sure System z runs for another 50 years

New Stuff

- Linux on z
 - Scalability
 - reduce license fees
 - Oracle... cough!
 - and even reduced support cost from SUSE and RedHat (per IFL)
 - reliability of the z platform

millennia...

New Stuff

- Oracle

Model	Size of Config	Number of IFL's	Enterprise Linux Servers	With Service Management setup	x86 Cores non virtualised	X86 Cores Virtualised	Oracle Non-virtualised	Oracle virtualised	Oracle on Linux for z
z114	small	2	£143,037	£166,893	80	16	£2,000,000	£400,000	£50,000
	medium	6	£260,177	£328,167	240	48	£6,000,000	£1,200,000	£150,000
	large	10	£358,731	£463,697	400	80	£10,000,000	£2,000,000	£250,000
z196	expandable	6	£448,000	£515,990	300	72	£7,500,000	£1,800,000	£150,000
	supersized	32	£1,600,000	£1,823,054	1600	384	£40,000,000	£9,600,000	£800,000

N.B – All IBM Pricing is subject to Special Bid and is **purely** for indicative purposes

N.B – Oracle cost are assumed to be £25K per core

New Stuff

- Ziips & Zaaps
 - ever increasing eligible workloads
 - not just supporting tradition z applications
 - but also XML and Java
 - allowing the customer to offer Java Web apps with the level of reliability required when running business applications using mission critical data

millennia...

New Stuff

- WebSphere
 - 3rd party middleware
 - MS Biztalk can speak with:
 - COBOL apps
 - WebSphere MQ
 - z/OS hosted files and DB2

millennia...

New Stuff

- zBX
 - windows/Linux presentation layer of an application
 - using z/OS or Linux on z for the database functions

millennia...

Cool Stuff

- Airlines
 - Ticketing systems
 - Flight statistics etc
- Direct Line
 - Rates tables stored in CSA
 - All quotes access mainframe even those initiated on the internet
- JD Williams
 - Marisota
 - Jacamo
- Mark and Spencer
 - Warehouse controls

Managing the 21st Century Mainframe

- Scheduling
- Automation
- Security
- Storage
- Web Enablement

millennia...

Scheduling

- 3rd Most Important piece of enterprise software
- Responsible for ensuring critical business processes are carried out on time and in the correct order
- Everything from customer billing to employee payroll via daily to yearly reporting jobs
- For a large enterprise this can amount to 10,000's of interlinked processes every day

millennia...

Automation

- 2nd Most Important piece of enterprise software
- Responsible for maintaining the computer environment and all of the resources used by all the other enterprise software
- Ensures all of the day to day system activities are carried out on time and in the correct order, every time. It doesn't take holidays, get tired or go on strike
- Any process that can be 'check-listed' can be automated
- For large enterprises this can involve monitoring 1,000,000's of events across multiple environments in a single day

Security

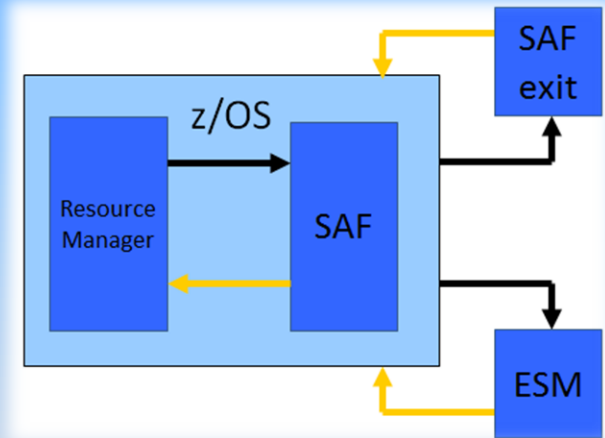

- Most Important piece of enterprise software!

- SAF

- RACF
- CA ACF2
- CA Top Secret

- Most Securable Platform

- Over reliance on defaults and lack of applied knowledge can leave the platform as open to “Hacker Attacks” as any other

Storage

- Space Management
- Backup and Recovery
- Efficiency

millennia...

Web Enablement

- FedEx Parcel Tracking
- Online banking
- zBX

millennia...

The Future

- Bigger, Better, Brighter!
- Cloud
- Virtualisation
- The mainframe is here to stay!
- Get involved or get left behind!

millennia...

The Next Step?

- Purchase the next 5 sessions for £100
 - z/OS Security (RACF, ACF2 & Top Secret) – 1 hour
 - Automation & Scheduling – 1 hour
 - Transaction Management Systems (CICS, IMS, WAS) – 1 hour
 - Databases (DB2, IMS, Adabas, IDMS) - 1 hour
 - REXX – 1 hour
- The sessions will start to be made available from late July

millennia...

The Next Step?

- z/OS Security (RACF, ACF2 & Top Secret) – 1 hour
 - A little bit of history
 - Users
 - Stuff
 - Auditing

millennia...

The Next Step?

- Automation & Scheduling – 1 hour
 - Automation basics
 - To automate or not to automate?
 - IBM's approach
 - ISV differences
 - Scheduling basics
 - What's all the fuss about scheduling?
 - IBM's approach
 - ISV differences

millennia...

The Next Step?

- Transaction Management Systems (CICS, IMS, WAS) – 1 hour
 - A little bit of history
 - A look at today's transaction management systems
 - Why pick one over the others?
 - Advanced functions
 - Web enablement?
 - Security/Audit trails

The Next Step?

- Databases (DB2, IMS, Adabas, IDMS) - 1 hour
 - A little bit of history
 - Tables
 - Views
 - Product specifics

millennia...

The Next Step?

- REXX – 1 hour
 - A little bit of history
 - Coding principals
 - Introducing variables
 - How to use the PARSE command

millennia...
