**YORKSHIREMAN
PACKAGED STEAM BOILERS**

**Including The Yorkshireman 2
The UK's most efficient Packaged Steam Boiler**

YORKSHIREMAN

PACKAGED STEAM BOILERS

Ever since the Yorkshireman boiler was introduced in 1988 it has been held in high esteem by Plant Engineers worldwide. Not only is it regarded as a sturdy and reliable workhorse but is also remarkably thrifty!

The traditional three pass wetback design of the Yorkshireman range is ideally suited for a continual heavy workload. Now with the recent introduction of the Yorkshireman 2, energy efficiency has been taken to new heights.

Every Yorkshireman boiler is individually built to meet specific requirements and is manufactured from start to finish in our own factory, thereby ensuring quality control of the very highest standard. All fittings are mounted in the factory to make installation on site as easy and quick as possible.

Yorkshireman boilers cover a duty range of between 1,000 and 18,000 kgs/hour, with working pressures of up to 20 bar/g.

PRINCIPAL DESIGN FEATURES & BENEFITS

- Traditional three pass wetback design for reliability and robustness
- Shell and furnace diameters are larger than other boilers to achieve best quality dry steam, low NOx emissions and ensure required output is reached with ease.
- Central furnace fitted with bowling hoops to minimise stress and extend lifespan
- Shell, tube plates and smoke boxes are heavily insulated to minimise heat loss.
- High performance ceramic smoke box insulation and unique ceramic plug in furnace access door.
- 100mm high density shell insulation to minimise heat loss
- Insulated inspection ports
- Quicker and more cost efficient ultra sonic inspections through design features such as removable cladding panels, lack of rear refractory and removable front plates.
- Tubeplate ligaments are in excess of BS2790 requirements, J prepped and TIG welded in the combustion chamber. This avoids tube end and ligament failure common in other makes of boilers.

- Jacking points to aid positioning on site
- High quality finish including a corrosion and dent resistant pre-coated sheeting.
- Every Byworth boiler is supplied fully packaged with best quality fittings and mountings. They also come fitted and wired.
- Heavy duty box cradles

COMBUSTION EQUIPMENT

Every Yorkshireman boiler is offered with a choice of pressure jet and rotary cup burners, each developed in close co-operation with the manufacturer and chosen to provide the very best combustion for the specific application and fuel.

The addition of a combustion management system ensures efficiency levels are continually monitored and trimmed to guarantee peak performance throughout the full firing range. The systems will also electronically monitor demand to make sure the exact amount of fuel and oil is fired to follow the boilers required load pattern accurately.

QUALITY FITTINGS AND MOUNTINGS

To ensure long and reliable service every Byworth boiler is built using quality fittings and mountings as standard.

Standard

Control panel (Byworth or other)
Feed pump
Cast steel angle pattern crown valve
Safety valve
Screw down feed check valve
Disk type feed check valve
In-line pump strainer
Key operated blow down valve
Twin water level gauges
On-off water level controls
Pressure gauge with inspectors test cock
Water sample cooler
Flue thermometer
Four jacking points and lashing eyes
Lifting lugs

Optional

Column mounted gauge cocks
Box section base frame
Elliptical inspection ports
Standby pump
Inverter driven pumps and burners
Second safety valve
Self monitoring and modulating water level controls
Automatic TDS controls
Automatic blow down valves
Remote panels
Water softening equipment
Gas booster
Auxiliary crown valves

YORKSHIREMAN²

As part of a 2 year R & D programme, in conjunction with the Mechanical Engineering Department of Leeds University, Byworth has developed the Yorkshireman 2 boiler. With an efficiency of around 92.3% (based on nett calorific values) the Yorkshireman 2 is the most efficient steam boiler available in the UK today.

YORKSHIREMAN 2 BENEFITS AND FEATURES

- Increased efficiency
- Outstanding efficiency keeps fuel bills to a minimum
- Lower maintenance costs
- Lower NOx emissions
- Ergonomical eye level control panels for ease of operation.

Yorkshireman 2
The UK's most efficient
Packaged Steam Boiler

THE IMPORTANCE OF EFFICIENCY

The government ECA scheme estimates most old boilers that are well maintained and in good condition run at around 80% (nett) efficiency.

Many operate at much lower efficiencies.

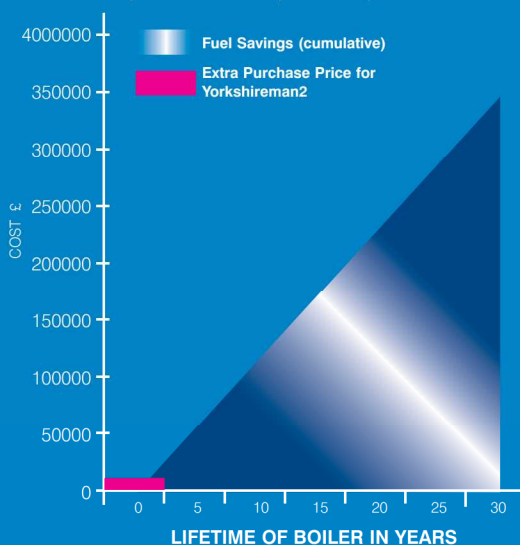

A typical gas bill for a 10 tonne boiler operating at 80% efficiency on a medium load will cost say £30,000 per month.

A Yorkshireman 2 operating at 92.5% efficiency would reduce the monthly fuel bill by around £5000.

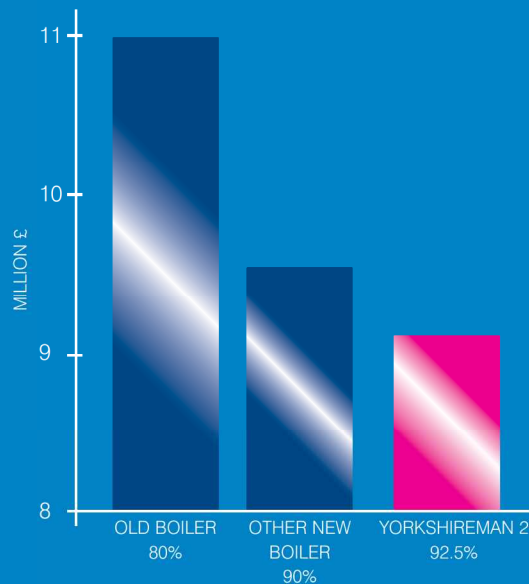

Taken over a typical lifespan of 30 years for a Byworth Boiler this equates to a saving of around £1,800,000

When this saving is taken into consideration the purchase price of a new Yorkshireman 2 boiler makes irrefutable economical sense.

Fuel savings of Yorkshireman2 over other new boilers compared with extra purchase price

RUNNING COSTS OVER LIFETIME OF BOILER

UNIQUE X-ID TUBES

The outstanding efficiency of the Yorkshireman 2 is achieved through incorporating X-ID Tubes. These tubes, unique to Byworth in the UK, have been proved to greatly enhance the heat transfer rate by up to 85% and increase efficiency by up to 2.5%. They are also self-cleaning, thereby helping to maintain boiler efficiency and reduce maintenance costs.

TRIED & TESTED

During manufacture every Yorkshireman boiler undergoes rigorous tests and inspections and is subjected to X-Ray and NDT tests of the main welded seams.

All Yorkshireman Boilers are built to BS2790 Class 1 (EN 12953), comply with current Pressure Equipment Directive (PED) requirements and are CE marked on completion. They are also designed to meet governmental and health service standards.

In addition, they are subject to hydraulic testing and are independently inspected and certified by Lloyds Register at all stages of manufacture.

Plate thicknesses of the Yorkshireman are in excess of BS requirements and they are made from best quality, certified materials.

Every Yorkshireman boiler is supplied with a complete operator manual and manufacturing report. This contains 'as built' drawings, electrical wiring diagram, test reports and material certificates.

SUPPORT SERVICES

Our comprehensive range of boiler support services includes:

- Boiler hire and lease
- Full installation service
- Service, repairs, parts & accessories

Bespoke Solutions in Waste Heat Boilers
Producing steam and hot water from waste heat.

ANCILLARY EQUIPMENT

To satisfy the diverse operational needs and specifications of different industries Yorkshireman boilers are offered with a choice of ancillary equipment including:

- Flue gas economisers mounted in the rear smoke box to improve efficiency.
- Full PM5 equipment including automatic blowdown and TDS control for unattended operation.
- Variable speed feed pump and burner fan motor to reduce power consumption.
- Modulating water feed.
- Factory mounted standby feed pump.
- Supplied with a Health & Safety compliant working platform and safety rails plus an access ladder which can be mounted on either the left or right.
- Complete containerised boiler houses
- Blow down vessels, steam accumulators and feed tanks

THE YORKSHIREMAN A time proven three pass wetback boiler

British Boilers at their Best

This chart relates to the YSX series boilers with working pressure up to 150 psi (10 bar). Please contact our Sales Department for technical details on the YSX plus the YSY with working pressure up to 200 psi (13.6 bar), the YSZ with working pressure up to 250 psi (17 bar) and the YZZ with working pressure up to 300 psi (20 bar).
