PRODUCT'S NAME

Rotoseal 12000

STRONG POINTS OF THE MACHINE

The Ilpra Rotoseal 12000 model is suitable for the application of an hermetic closure on bottles. The cap, that is automatically cutted and formed, is made of coated foil coming from a reel. The foil must be compatible with the material the bottle is made of. The machine features a sealing unit composed of a turret with 12 self-centering sealing heads. It is versatile, that means it can be easily customized regarding both the output and the possibility to seal a wide variety of bottles. The machine can operate either as a free-standing unit to be fitted in existing lines or be synchronized with automatic filling machines.
