

TRU-STRIDE Stilts

A Revolutionary STRIDE in Stilts Technology

Patented two-piece foot plate provides “ankle” function with a heel to toe movement that translates into a smooth, natural stride

When the legs of the stilts are extended, all the advantages of the Tru-Stride ankle function increase proportionately. The greater the height, the greater the advantage!

- **The heel and toe plates provide greater stability since one pad is in full contact with the ground at all times**
- **The natural walking motion uses less energy, greatly reducing the lifting of the stilt necessary to walk**
- **Provides greater stability on uneven surfaces and ground clutter**
- **Easier and faster loading**
- **Allows walking uphill, downhill and on stairs**
- **There are no rotational forces transferred to the calf from the traditional rigid one piece floor pad, so there is less pressure on the calf allowing longer pain-free work periods. The lack of rotational forces also allows abrupt changes in momentum (coming to quick stop or start)**

US and Foreign Patents pending

Distributed in the U.K & Ireland by Plastering Tools Centre Ltd
