# ProCrease

The new dawn in creasing matrix technology

We called it “a new dawn in creasing matrix technology” and with good reason. **ProCrease** is the most advanced creasing matrix ever developed by Man Mat, Produced at our own facility in Tonbridge England

**ProCrease** is a completely new design from the ground up. **ProCrease** is manufactured using state of the art, laser-controlled technology. Our research into new materials has resulted in a creasing matrix with excellent impact strength for longer life and engineered shoulders for faster, smoother substrate throughput.

**ProCrease** is colour coded (by channel height) and both locator and matrix are printed with product dimensions, so you'll never find yourself accidentally using the wrong size matrix. Our patented adhesive-free locator bonding leaves no sticky residue, saving time and making better creases. And it's easy to use thanks to our superior-quality finger-lift adhesive system. The engineered shoulder shoulders perfectly bonded to ultra-thin film base. We think it's our best matrix yet. And we're willing to bet you will too.
