

DANLERS

Controls for Lighting & HVAC

Light + Building 2020 is almost upon us and this year is particularly exciting as it happens to be the 20th anniversary for this global event. The show is also very special to DANLERS' Executive Chairman, Tony Kay and Managing Director, Julian Kay as both first exhibited here back in 2000.

This year, DANLERS will be showcasing collaborations in smart energy saving lighting control including those with: Casambi, Ingy, MyMesh, Silvair, and Wirepas. Each of these innovative protocols features wireless network communication via Bluetooth to provide lighting control and connectivity within their individual ecosystems, without the need for wiring between the sensors, luminaires and other enabled controls.

DANLERS uniquely, within each ecosystem, offer a wide range of detection options including: build-in modules for luminaire manufacturers, IP66 rated controls for damp or outdoor applications, high bay options for industrial applications (with mounting heights up to 20m) and also more discreet ceiling mounted options for commercial and domestic applications.

“The Light + Building event provides us with a global platform on which to showcase new products and to enhance and develop relationships with customers and key decision makers in the lighting industry” commented John Woodhouse, Marketing Manager.

DANLERS Limited will be exhibiting at Light + Building Frankfurt am Main, from 8 to 13 March. Hall 8.0 Stand C91.
