Case Study : 2012 Olympics Athletes Village – SUDS Rafts

OLYMPIC
DELIVERY
AUTHORITY

VolkerFitzpatrick

Client: ODA

Contractor: VolkerFitzpatrick

AquaticEngineering secured the fabrication and installation of 3 floating remediation raft systems at the Athletes Village in the 2012 Olympic Park. The contract was won on the basis of innovative design and value for money.

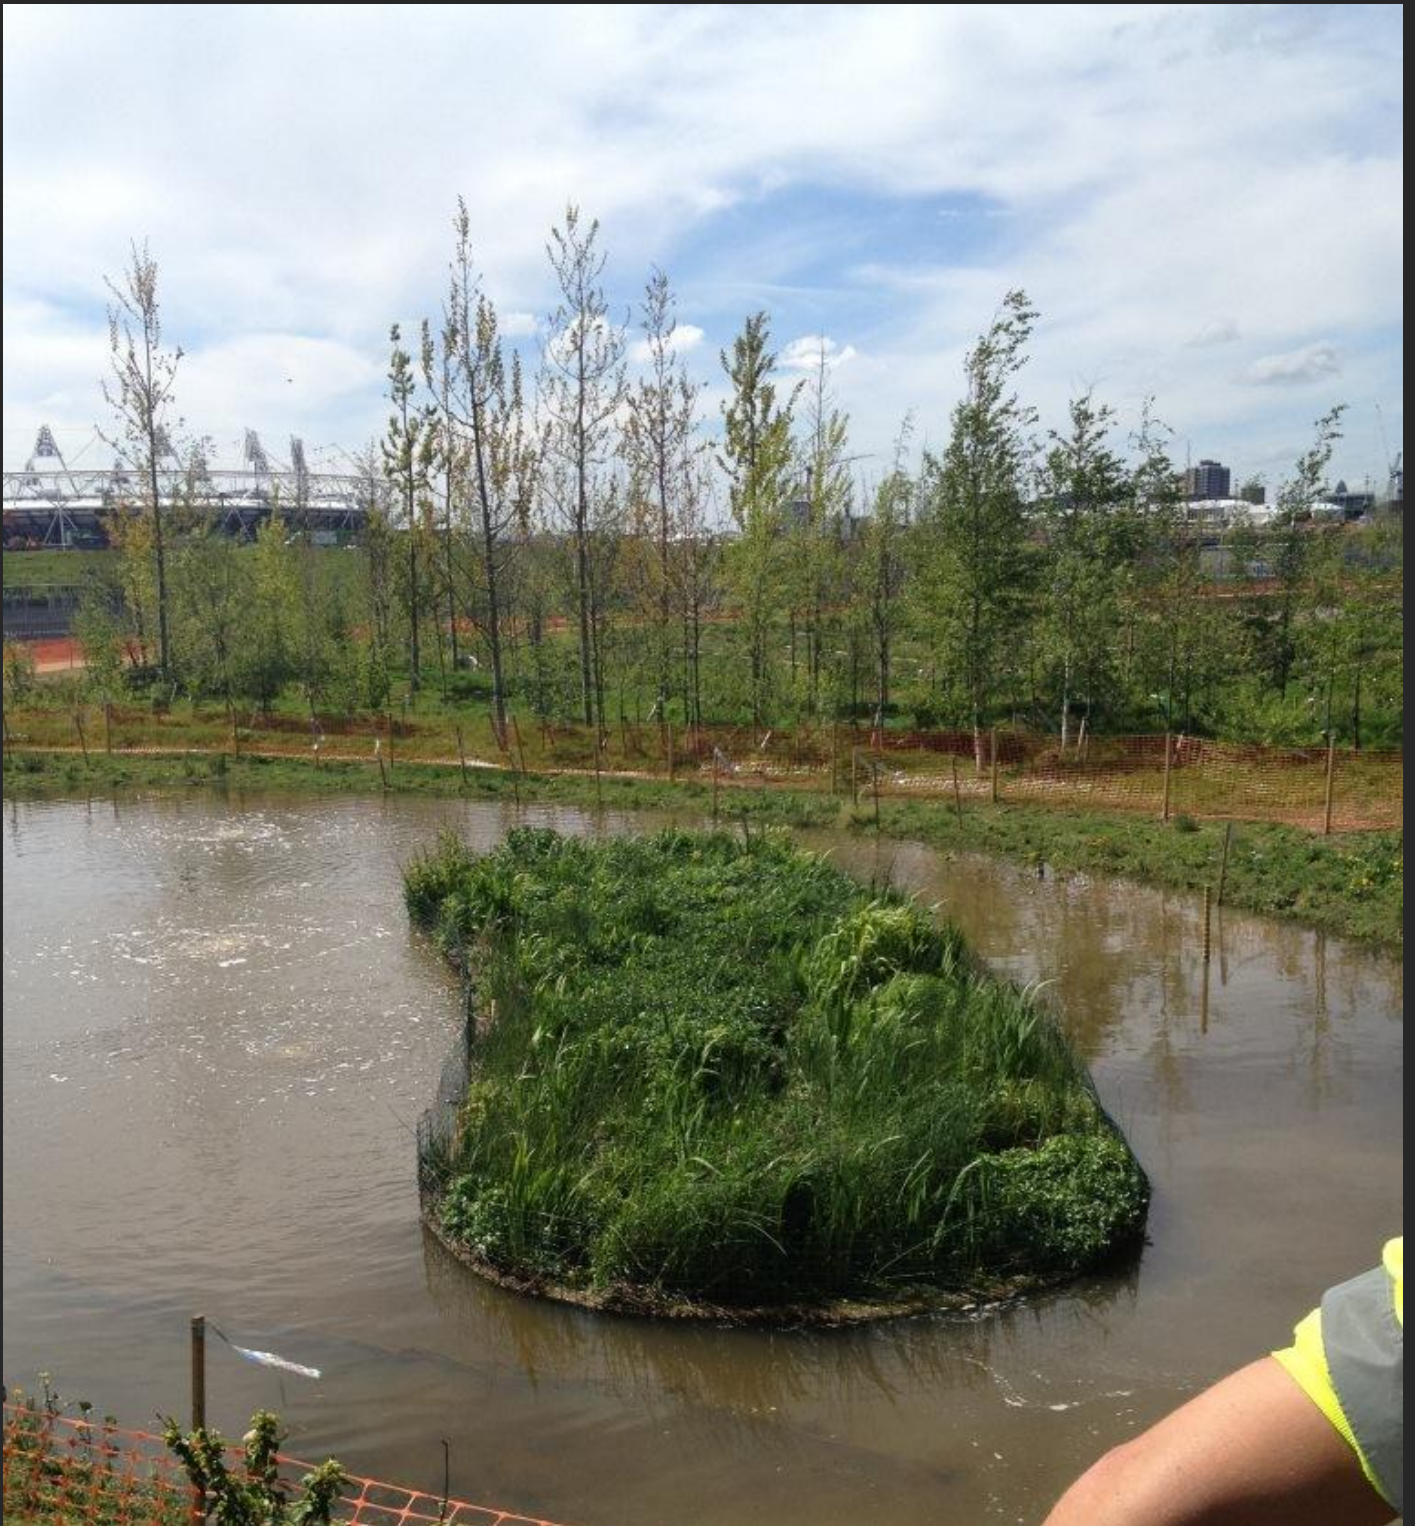

AquaticEngineering had worked on the design of the raft with ODA consultants and design engineers since 2009. The supply and installation contract then went out to competitive tender and was secured by the company in early 2011.

The initial installation was undertaken by our team in August 2011.

The rafts were planted with pre-established coir pallets and a goose anti-predation fence installed.

By April 2012 the rafts were looking good for the 2012 London Olympics
