WEB PROTECTION

SAFEGUARD YOUR USERS WITH WEB PROTECTION

Web threats have increased dramatically in recent years. From phishing sites to lost passwords and drive-by malware downloads, the risk of a security breach has never been greater.

This best-in-class Web Protection service will keep your users safe and productive. It complements traditional antivirus engines and firewalls by letting you define your own content-filtering policies, website blacklists, time - and content-based browsing policies, and much more.

And you can manage everything from a single, easy-to-use web-based console.

KEEP YOUR NETWORK SAFE

- **Threat protection** – Protect against malware, phishing, adware, botnets and spam.

- **Bandwidth monitoring** – Monitor daily usage with automated bandwidth checks and alerts.

- **Access controls** – Keep users away from sites that could cause a data breach.

IMPROVE USER PRODUCTIVITY

- **Site blacklists** – Define and automatically enforce browsing policies that keep users off non-work-related sites like gaming or social media.

- **Time-based browsing policies** – Modify blacklist rules to allow employees to visit non-work sites outside of standard business hours.

- **Reporting** – View detailed analytics on internet usage, and quickly spot unusual browsing behaviors and take appropriate action.

GAIN COMPLETE CONTROL

- **Simple administration** – Gain control over users' web browsing, all from a unified web-based console.

- **Custom policies** – Use our default Web Protection policies or create your own custom rules for desktops, laptops, or servers.

- **Custom messaging** – Create your own messages that appear when a user reaches a website blocked by their web protection blacklist.

- **Custom URLs** – Add custom URLs to the blacklist that don't fall within our core site categories.

- **Snooze** – Temporarily disable policy enforcement for a given time period to more easily troubleshoot user issues when needed.
