“The home of performance packaging”

Introducing a totally unique product to the world of bulk powder/granular handling. Cliffe Packaging is pleased to present the SFX Bulk Bag, a product which is manufactured in the UK by Structure-flex.

The SFX Bulk Bag is manufactured from PVC coated polyester fabric, with all welded seams making the product completely watertight. In fact, the bag is so watertight that once filled, it can be left outside without detrimental effect to the performance of the packaging.

SFX Bulk Bags are designed to carry expensive hygroscopic products to protect them from the harshness of any external environment.

With a life expectancy of over three years, each SFX Bulk Bag quickly pays for itself, recording trip after trip. Even when damaged, bags can be repaired very quickly without compromising the quality or safety performance of the bulk bag.

Such reusable packaging will help to ease pressure on the environment by reducing the volumes of disposable packaging normally associated with other types of bulk bags.

PVC bulk bags have been around in various forms for over forty years. They were first used in the deserts of the middle-east and the jungles of south East Asia for the

storage of specialist chemicals for the oil industry. Experience gained in these demanding conditions has allowed product adaptation and today, though in a different form, the SFX Bulk Bag is used to store chemicals, food stuffs and pharmaceuticals by many of Europe's leading manufacturers. It is, without doubt, the ULTIMATE bulk bag.

There is a wide variety of materials available to suit your needs. Whether your product is abrasive, sterile, chemically sensitive, conductive or even corrosive, the SFX Bulk Bag can provide a solution to all your problems.

For specialist packaging applications, SFX Bulk Bags can be supplied with different surface coatings.

For example, for food and pharmaceutical products, we can supply polyurethane coatings. For highly volatile environments, antistatic coatings are applied to ensure risk free filling/discharging.

SFX Bulk Bags can be produced to carry UN certified hazardous materials. Full UN certification can be provided.

Safety is paramount. SFX Bulk Bags are supplied with an 8:1 safety ratio on the safe working load of the product. Wear protection is added to the lifting loops to prolong the life of the product. Document pockets are welded into the fabric to ensure documentation remains visible and safe from water ingress.

SFX Bulk Bags are available in a wide range of colours. This will enable you to colour code your products, eliminating mistakes caused by damaged or obscure labelling. When empty, the bags can be collapsed to occupy less space. They can easily be stored and returned for refilling. Draw strings and special closures are available together with double skirts and hygiene flaps, all designed to match existing filling and discharging equipment.
