## Why do I need Protection?

61% of data breach victims in this year's report are businesses with under 1,000 employees.

40% of businesses hit by a disaster never re-open if your systems go down.

### Myth #1

#### I'm not a large enterprise, hackers won't attack me.

No one is exempt from cyber-attacks. Hackers are intelligent often looking for something quick and easy like SMB's who believe they are not at risk, tend.

### Myth #2

#### I don't have the funds or resources for cybersecurity.

You might feel you're not in a financial position to invest in protection but there are huge cost implications of a breach due loss of business from reputational damage.

### Myth #3

#### Technology is better now & punishment is worse for cyber criminals.

More than 300,000 new malicious files are being created every day and spread through the Internet.

Get IT and Data Security

Security spending is increasing at **double** the rate of overall investment. A predicted \$1 trillion will be spent globally on cybersecurity from 2017 to 2021.

**Ensure you're a part of that investment.**
