Denis Serov, Combi Lift
Chief Engineers

How do we support sustainable energies?
We raise the limits.

Nordsee One Project, February – May 2017

Renewable energies are becoming an increasingly important component of our energy mix. At Combi Lift, we believe in sustainable solutions. This is why we're handling the transport of components for Nordsee One – an offshore wind farm spanning a total area of 41.3 square kilometres, located in the German part of the North Sea. Once operational, the 54 Senvion turbines will produce 1.2 billion kilowatt hours per year. Nordsee One will be able to power 400,000 households.
