MonitorPro

Environmental Data Management for the Metals & Mining Industry

Significant volumes of data are collected to comply with modern environmental standards placed upon operations in the Natural Resource Sector. Companies with strong Environmental Stewardship will see a need to manage this data in a professional Environmental Database Management System and MonitorPro is currently used by more mining companies than any other system of its type.

What is MonitorPro?

The MonitorPro Environmental Data Management Systems are being used by a large selection of natural resources companies and have been since 2002. During that time continuous development and additions to the suite of products and services has created an industry leading solution for environmental professionals.

What Can it do?

MonitorPro systems offer users a single storage repository for all diverse environmental, sustainability and energy data. An accredited system, which means data is secure, auditable and defensible to scrutiny from relevant stakeholders.

Numerous intuitive tools are offered without the need for multiple modules and customisations. Timesaving, flexibility and audiability are at the heart of MonitorPro.

Below are just some of the features included in the system that offer a quick return on investment:

- Automated Imports
- Data Validation,
- Compliance checking,
- Email Alerts,
- Scheduled Tasks,
- Monitor Scheduling,
- GIS
- Flexible Reporting

#1 Globally in the Mining Industry
