CUBICO 40 // CUBICO 30 // CUBICO ALTO 40 // Yucca elephantipes 'Jewel'

Planters with the ultimate irrigation system

Convenience is our starting point when it comes to the material and the use of our planters. These planters have a self-watering system which ensures that your plants are provided with the exact amount of water they need so that they stay healthy, without continuous maintenance.

*Oasis – Renown for excellent home and business landscaping.
We nurture for nature.*

The Special Advantages of Oasis Planters

- * Premium plants due to the continuous water supply to the plant roots
- * Less human input and watering as the plant does it itself.
- * Plants are easily replaceable. The inner bins are removable allowing themselves to easily change the position and transport.
- * Made to the highest German Quality production standards.

CUBICO ALTO

Elegant landscaping at eye level

Especially in the professional environment, a competent interior design is needed and this can easily be done by using plants. CUBICO ALTO allows you to do this with its small footprint and elegant height to fit in virtually every space so perfect for great performance in a small space.

The special advantages of CUBICO ALTO:

- Uses the same inner as Cubico 40
- Only needs to be planted once and you have the choice to use Alto or 40
- Stable position
- Small footprint in width (only 40 x 40 even with a height of 105 cm)

DIAMANTE

Facettenrijke plant pot

The special surface structure of the DIAMANTE with its high gloss discover new facets with each new light. Through this luxurious effect, DIAMANTE is particularly suitable for tall or exotic plants, combining with the planters superiority to bring environments to life.

The special benefits :

- The removable liner fits well in DIAMANTE and in RONDO 40
- Available in four high-gloss finishes

reddot design award
best of the best 2008

DELTA

From every angle of an excellent design

The DELTA planter combines technology and design: the flowing, organic planter design ensures the hidden irrigation system is fully functional reliably making the plants last longer.

The special advantages of the Delta 30 and 40 :

- Removable liner with irrigation system
- Slim, tall plants column
- Safe and stable

CLASSICO

Each CLASSICO 21/50 m is now available in all colours with the integrated liner, for easy exchange and replacement of the plant.

The inner handle is finished in the colour of the planter and is again sunk in the pot after use. This not only emphasizes its practical function, but also furthers the design of the plant pot.

How are our planters distinguished from others? Everything.

Our planters are not only beautiful, they are true art.

The only way to get perfect plants is by a self-watering system, this is found in any of these planters in this brochure. Our irrigation system turns looking after plants into child play: all you have to do is fill the water reservoir integrated in the bottom of the planter, This will last 12 weeks then do it again!* How simple is that? No constant watering needed.

No stagnant water. The original sub-irrigation system is suitable, both for plants that need a lot of water, and for plants that take up less water, such as succulents (cacti, yucca, etc.).

There are a few interchangeable liners, retractable handles and plants rollers virtually invisible disappear among the pots. These planters make your daily living as simple as possible.

The original irrigation system

- The original sub-irrigation system turns plant care into child play
- Never drowns your plants! Always gives them the right amount.
- 12 weeks without constant watering

- 1** Helps to avoid mistakes and under/overwatering - has a 'minimum' and 'maximum' mark showing when you have given the plant enough water
- 2** This supplies the plant with the exact amount of water the plant needs
- 3** The store of the water - it is held here and passes the water onto the roots as soon as the plant needs it and gives it the exact amount.

Patented: The liner

The stable liner facilitates the placement and replacement of planting and transportation.
Formed with functionality: Diamante, Rondo, Delta, Classico and Quadro; S inner containers are simultaneously embellished by a handle painted in the colour of the pot.

Handle white

High finish quality "Made in Germany"

Made in a factory with environmental certification according to the highest production standards produced and painted.

* Depending on the size of pot, plant, and location.

Growing plants and accessories

PON

The pure mineral plant substrate alternative to soil

Packaging supply unit

6 litre	12 litre	25 litre
---------	----------	----------

Larger packaging on request

PON is the perfect alternative when no conventional soil can be used as a plant substrate. The structure is stable and the inorganic plant substrate PON offers optimal properties. It not only stores nutrients but if needed, it passes them on to the plant. It also protects the pH-value and stores 40% volume of water in event of air pores. Wrong fertilization is prevented by the excellent protective properties of the substrate. PON stores excess fertilizer and releases it gradually to the plant. PON is made from pumice, zeolites and lava, and is equipped with NPK fertilizer (15-9-9 + 3; 3 g / L) in the factory, which provides your plants for up to 12 months of adequate nutrients. PON is inorganic and therefore virtually sterile.

PON does not perish. This has the advantage that PON plant substrate does not need to be replenished, such as traditional earthenware and also issues still sufficient air to the plants after many years, which promotes the plant growth active.

Note: If you choose PON as a plant substrate instead of soil, you need to water the substrate from above regularly!

TERRAPON

New plant substrate of humus and mineral components

Packaging supply unit

15 litre

TERRAPON combines humus mineral components. The name TERRAPON stands for healthy, beautiful plants growing. And so again this has developed a high-quality plant substrate that combines the positive properties of organic humus with mineral components such as pumice and broken clay granules: TERRAPON.

This new substrate is made from high quality materials such as those being used in the professional horticulture and landscaping industry. These are pumice, broken clay pellets and an effective mix of fertilizers. The fresh clay acts as a natural reservoir for water and nutrients and promotes uniform feeding there.

TERRAPON can be used for almost any room, balcony and garden plants, other than plants of the heath family that make special demands on the pH level of the substrate. Plant orchids, which also set very special demands on the plant substrate, always in TERRAPON.

Plants Roller CLASSICO/QUADRO
