

eSignature and Digital Transaction Management Automation for JD Edwards

KEY POINTS

- Built on JDE toolset
- No additional hardware dependencies
- Rapid installation
- Easy upgrades, no vanilla JDE objects impacted

RELEASES SUPPORTED

- EnterpriseOne 8.12, 9.0, 9.1 and 9.2
- Works on all hardware platforms supported by E1

Increase productivity, reduce cycles, and close deals faster with secure and reliable DocuSign agreement solutions that are already integrated with powerful Oracle cloud solutions.

JDESign® is an eSignature and Digital Transaction Management (DTM) Automation software for JD Edwards EnterpriseOne, which provides feature rich APIs to manage any kind of eSignature transaction scenarios from within JDE. Partnering with DocuSign, the global standard for DTM, JDESign is the easiest way to send, sign, track and manage the complete DTM lifecycle for JD Edwards.

Robust Feature Set:

eSignature APIs - Robust set of APIs to manage various eSignature scenarios

Multiple Document Types - PDF, DOC, RTF, TXT, XLS, PPT, JPG, GIF and many more, from sources such as UBE, BI Publisher, Media Objects and Network files

Complex Recipient Routing - Near unlimited recipients, send orders, mix and match document signature profiles

Email and In-App Signing - Signatures can be managed through emails (non-JDE entities) or via in-app signing (JDE users)

Auto Reminders - System can send reminders at custom designated intervals, and auto cancel based on thresholds

Deferred Mode - Handle complex scenarios (multiple UBEs with long running times etc.) via deferred mode support

Events, Workflows and Tracking

JDESign features a fully functional events and workflow engine that can be used to integrate pre and post eSignature processes into the DTM flow. It can be configured to execute custom scripts, launch batch jobs, send notifications and emails, trigger orchestrations and handle other custom defined events. Full end to end DTM lifecycle can be tracked.

Use Cases

JDESign can be used to automate any eSignature and DTM transaction exactly per the customers specific use case scenarios. Some typical example might include:

Real Estate Management – To manage real estate document workflows such as Lease Agreement, Broker Agreements and Guarantor Agreements

Contract / Agreement Management – Integrate into Sales Agreements / Proposals / Quotes and Service billing contracts

Human Resources – To manage new hire packets involving offer letters, tax documents, letters etc.
