Introduction and Catalog Index

Introduction

This catalog was developed to assist our existing customers as well as introduce our new customers to the products that many of you have requested over the years. Our goal is to develop closer ties and relationships with you by providing "One-Stop" shopping for your morgue, field and lab supply needs.

Although there are many common products offered herein, we have developed access to resources which allow us to locate and source almost any morgue or lab product commonly used in our field. Please call us or ask your Customer Service Representative for any products not included in this catalog offering. As recipients of the Department of Defense Vendor Excellence, we strive to provide only the most complete and responsive customer service in the industry.

This catalog as well as other information is available by contacting us toll free at (800) 345-2922. You may also download it from our internet site www.medicalproducts.com or email us at sales@medicalproducts.com.

"Easy Write On" Metal ID Tag

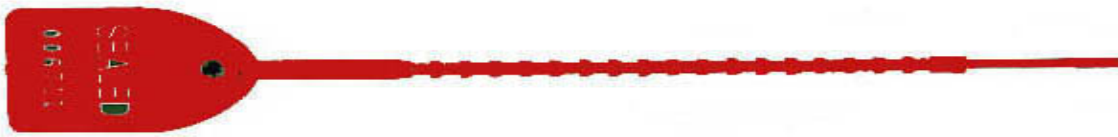

- Easy Write-On metal tag with attachment wires
- Ideal for use in extreme environmental conditions
- Soft metal allows use of almost any marking or writing implement including sticks, keys etc.

Part No	Packaging	Qty/Cs	Lbs/Cs	Kg/Cs
TAG-METAL-01	METAL TAG ONLY	100	1	.45

+

Serial Numbered Tamper Resistant Body Bag Seal

- 8" Long serial numbered plastic ID tag
- Sequentially numbered in lots of 100
- Designed to fit Medicalproducts body bag zippers
- Custom number series available (1,000 pcs min.)

Part No	Qty/Cs	Lbs/Cs	Kg/Cs
TAG-MPSEAL	100	1	.45

Write-On Wrist or Ankle ID Band

- Write-On band with "Use Once" permanent snap style closure
- Each case packed with marking pen
- Available in vinyl or polypro material

Part No	Material	Qty/Cs	Lbs/Cs	Kg/Cs
MC-01-4440-W	WHITE VINYL	250	2	.90
MC-01-5040-W	WHITE POLY-PRO	500	3	1.36

Body Bag Identification Kit

- Re-sealable, self adhesive Ziploc pouch for paperwork
- Red Bio-Hazard Tag
- Yellow Contamination Tag
- 3 White tags for toe, exterior of pouch & personal effects ID

Part No	Qty/Cs	Lbs/Cs	Kg/Cs
BBID-KIT	50	1	.45

NIOSH Respirator Filter Standards

1. Respirators with N100, N99, and N95 filters (99.97%, 99%, and 95% efficient filters) may be used for any solid or non-oil containing particulate contaminant.
2. Respirators with R100, R99, and R95 filters (99.97%, 99%, and 95% efficient filters) may be used for any particulate contaminant. If used for an oil containing particulate, a one- shift (8 hour) use limit applies.
3. Respirators with P100, P99, and P95 filters (99.97%, 99%, and 95% efficient filters) may be used for any particulate contaminant.

All NIOSH certified respirators have an assigned "protection factor". The "protection factor" indicates how much the respirator will reduce a wearer's exposure to airborne particles assuming a good fit.

The goal of using a respirator is to reduce the exposure to an acceptable level that will not adversely affect the wearer. The assigned protection factor predicts the potential reduction in exposure that would occur if one were properly wearing that type of respirator properly fit to the face.

Protection Level Table

Concentration of Airborne Particles	Respirator Protection Factor	Protection Level
10,000 Part. Per Cubic Foot	10	This means the person could expect to reduce their exposure by 10 times resulting in a possible inhalation of 1000 particles.
	50	This means the person could expect to reduce their exposure by 50 times resulting in a possible inhalation of 200 particles.
	1000	This means the person could expect to reduce their exposure by 1000 times resulting in a possible inhalation of 10 particles.
	10,000	This means the person could expect to reduce their exposure by 10,000 times resulting in a possible inhalation of 0 particles.

 Level A	Level A represents the greatest danger of respiratory, eye or skin damage from hazardous vapors, gases, particulates, sudden splash, immersion or contact with hazardous materials. It calls for total encapsulation in a vapor tight chemical suit with self-contained breathing apparatus (SCBA) or supplied air and appropriate accessories.
 Level B	Level B situations call for the highest degree of respiratory protection but a lesser need for skin protection. It calls for SCBA or positive pressure supplied air respirator with escape SCBA, plus hooded chemical resistant clothing (overalls and long sleeved jacket; coveralls; one or two piece chemical-splash suit; or disposable chemical-resistant coveralls boots and gloves.
LEVEL C	Level C is the lowest level of hazmat protection. Level "C" requires NIOSH N95 or higher level of respiratory protection but a minimal need for skin protection. It calls for half mask or full-face negative pressure respirators or powered air respirators (PAPR's). Level "C" requires use of a hooded chemical resistant suit or two piece chemical resistant suit, chemical resistant boots and gloves. Respirator must be able to remove <u>all</u> chemical and biological agents and the agent must pose <u>no splash hazard</u> .

ANSI Coverall Sizing Chart

Encapsulated Suit Sizing Chart

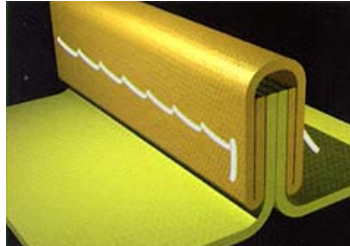

Seam Construction for Protective Clothing

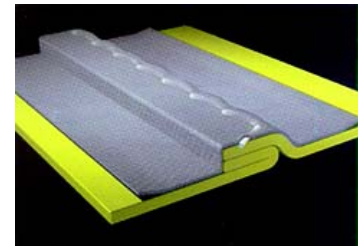

Serged Seam

Exposure limited to dry particulate agent or light splash of liquids not harmful to skin.

Sewn and Bound Seam

Higher degree of risk of exposure to agents in either liquid or dry form.

Heat Sealed Seam

Highest Degree of protection from harmful liquid, dry chemical or unknown agents
