

How Fresh is my Fish?

Is it of good quality?

Tellspec Enterprise Scanner and Fish QC and Fraud application

Our sensor can be used to analyze the quality and decay of white fish in a rapid, accurate and non-destructive manner. It also detects the fraudulent use of excess water in frozen fish.

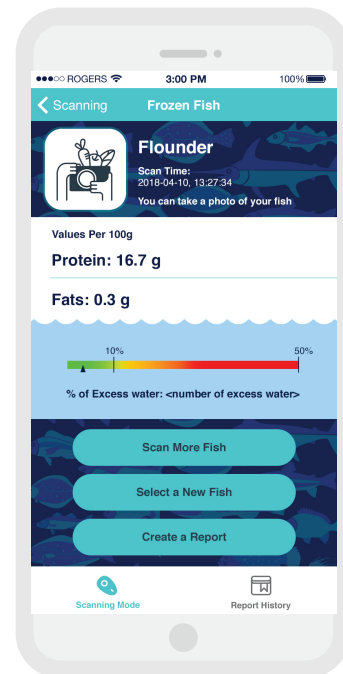

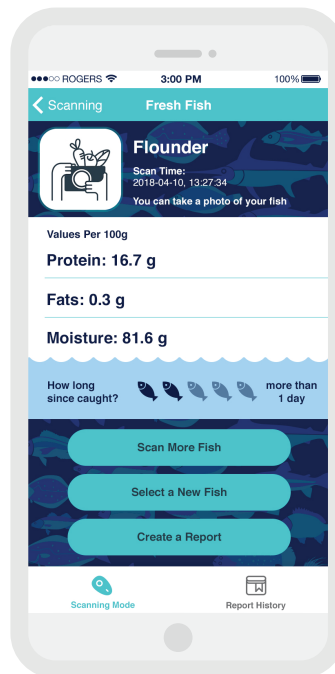

1. **Quality test:** measures Fat, Protein and Moisture for both fresh, defrosted and frozen white fish;
2. **Decay test:** measures the bacteria count and gives how fresh the white fish is;
3. **Short Weighting test:** tests for weight fraud by measuring the excess of water in frozen fish.

FishQC and Fraud

Fish Quality Control and Fraud Detection app by **Tellspec Inc**

This solution helps reduce the costs associated with fish fraud and fish waste and helps us to continue to fish in the oceans for edible seafood, in a regulated and sustainable manner, by reducing the unfair competition that fraudulent fish have in the market.
