

Inspired  
Efficiency

Inspired Efficiency is passionate about helping organisations realise maximum benefits from improved energy, carbon and sustainability efficiencies.

We challenge established conventions and use innovation along with an original approach to design and implement solutions that deliver outcomes which are realistic, pragmatic but above all, valuable.

We work by inspiring people, optimising technology and liaising with other service providers to deliver real savings in a market which increasingly demands more from less. We have a proven track record of delivering satisfaction and efficiency in many key areas including local authorities, education and commercial office and retail.

## Audits

Many organisations want to know the best way to reduce energy costs. You might know that you want to save money on your energy bills, but don't have the expertise to ensure you are maximising your potential savings.

*"You could save 20% of your utility costs by undertaking some simple steps."*

IE has the technical knowledge and experience to carry out a range of initial steps to save you money. Auditing your buildings is the first step and this can be done with a variety of goals in mind. These include:

**Saving Opportunity Scan**  
**Full Energy Audit**  
**Investment Grade Audits**

IE undertakes detailed and intelligent reviews of your existing built assets. This will give you the information needed to start reducing your energy and water usage and start saving you money.

Each organisation and building is different but a typical approach would include:

- Gaining information on how much energy the building currently uses and how the organisation uses the building and its comfort requirements
- Undertaking a site visit to review all areas from the boiler room to the staff energy behaviours. We seek to gain as much information and detail as we can on site in a manner which does not disrupt or interfere with the organisation's operations.

Inspired  
Efficiency

- Undertaking detailed calculations of the costs and savings on a full variety of savings recommendations supported by market quotes from actual suppliers where relevant. The final report is then prepared and present in a way that is easy to understand by a variety of audiences, provides a prioritised programme of measures from zero cost to longer term and encourages action.
- Any capital measures recommended can include fully costed proposals from installers with challenged and verified performance levels to build up investment grade business cases as required. Financed solutions can be worked up and presented where internal capital is not available for investment.

IE is flexible in its approach; one size does not fit all in terms of both practical measures or ways of engaging. If you just need a few hours of expert advice to steer you in the right direction or you need to fill a longer term role to deliver a programme over years IE can adapt to fit you and your needs.
