PALLET[®] PAL LEVEL LOADERS

These are the products that revolutionized manual pallet loading and unloading in North America. PalletPal[®] Level Loaders automatically position pallets to the ideal height for manual loading and unloading. Starting with the original automatic spring-actuated unit introduced by Southworth in 1988, the line has grown to include several products, tailored for specific application niches.

PALLET[®] PAL FULLY AUTOMATIC SPRING-ACTUATED Ideal for Most Applications

With inherent stability and no power sources or connections, the fully automated mechanical PalletPal[®] is virtually maintenance-free. The turntable is easily rotated even when fully loaded and allows for nearside loading and unloading without walking around the unit.

Best used with uniform loads

Spring installation is fast and easy. Springs accommodate wide load range with no need for adjustment and require no tools.

CAPACITY	LOWERED HEIGHT	RAISED HEIGHT	APPROX. SHIPPING WEIGHT

*CAUTION: PalletPal springs are precisely calibrated and will work best within the load weight and height ranges selected. Selection based on higher or lower than actual weight will result in restricted raising or lowering capability. Should pallet weight or height requirements dramatically change, PalletPal can be adapted in the field at any time by simply changing the spring combination used.

Specifications:

Capacity: 220 to 4500 lbs.
Rotator ring outside diameter - 43-5/8"
Compressed Height: 9-1/2"
Extended Height: 27-3/4"
Weight: 420 lbs. each, approx.

POWERED PALLET[®]

When loads, weights, pallet sizes or product dimensions vary greatly, a Powered PalletPal[®] with total operator control is the solution. A foot control allows the operator to adjust the load to an infinite number of positions up to 32 $\frac{3}{4}$ " (plus pallet), so it is always at the most comfortable height for loading and unloading. The manual turntable allows quick and easy rotation of the load so that the operator is always working on the near side, eliminating reaching, stretching and walking around. Built-in fork pockets provide both ease of portability and additional stability.

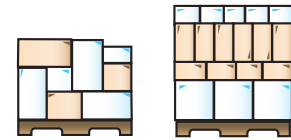

Powered PalletPal Level Loaders are available in two styles. The **Hydraulic Powered PalletPal** works on standard 115V power and is available in 2,000 and 4,000 lb. capacities. The **Pneumatic Powered PalletPal** operates on shop air. A heavy-duty airbag positions pallet loads weighing up to 4,000 lbs. with as little as 80 psi.

Foot controls position the load at any height within the unit's working range.

Fork pockets for relocation by fork truck.

Best used with non-uniform loads (mixed product sizes)

MODEL NO.	LIFT MECHANISM	CAPACITY	TURNTABLE DIAMETER	LOWERED HEIGHT	RAISED HEIGHT	POWER	PRICE

SOUTHWORTH

PALLETPAL® DISC TURNTABLE

Low-profile design, less than 1" high, allows PalletPal® Disc Turntables to accept a hand pallet truck. By rotating the load, the operator always works from the nearside without walking around the pallet. The risk of injury from reaching or stretching is virtually eliminated. The turntable can be easily moved throughout the plant.

PALLETPAL DISC TURNTABLE

SOUTHWORTH

PALLETPAL® ROLL-ON™ For Use with Hand Pallet Trucks

With internal hydraulic power, PalletPal® Roll-On™ Level Loaders lower to floor height so pallets can be rolled on and off with a hand pallet truck. The lift is then easily adjusted by pushbutton or foot switch control to maintain an ideal height for manual loading and unloading. The narrow side and back panels provide easy reachover for four sided access.

Now available with One Touch Auto Leveling

Allows the operator to "dial-in" the exact increment of travel for loading or unloading. It will also return the platform to full height (or to fully lowered position) at "one touch of the button."

SOUTHWORTH

PALLETPAL® ROLL-IN™ For Use with Hand Pallet Trucks

A unique low-profile design allows the Roll-In™ to be fed with an ordinary hand pallet truck. Simply pick up the palletized load (on any type of open-bottom pallet or skid), raise the pallet truck and roll the load into position. The pallet moves over the Roll-In while the pallet truck rolls in between the outside platform and center support beam. The load is uniformly positioned and the pallet truck can be lowered and rolled out of the way. Workers can access loads from all four sides with minimum reachover. A convenient foot switch control allows for hands-free positioning of loads, and a full perimeter toe guard provides an added measure of safety.

Stack-n-Go Fully Powered Stackers

Stack-n-Go compact stackers are versatile multi-purpose machines ideal for transporting loads on pallets, stacking loads up to 7 feet high or as an adjustable height workstation for loading and unloading pallets. They feature both powered lift AND powered drive. Four Stack-n-Go Stacker models are available. All feature a narrow mast and offset handle to give operators a clear view of what is in front of them. Forward and reverse drive controls are located on either side of the steering handle and an auto-reversing belly switch protects workers when walking backwards with the stacker.

Choose a Fork-Over unit for use with OPEN bottom pallets or skids, or a Straddle Unit for use with ANY pallet or skid, even CLOSED bottom.

All units feature a 62" mast (lowered height). The unique 2 stage mast design of the Model FPS2500-90 NAS offers lifting heights over 7 feet while maintaining the 62" lowered height.

These prices do not reflect the 8% Steel Surcharge...please add 8% to the price shown. NOTE: There are no Surcharges on the Dandy Products, the PML and PMLS stackers or the Pal-let Pal Lift Truck.

Available in Fork Over and Straddle Styles

SOUTHWORTH

PALLETPAL® ROTATOR/INVERTER

Restack Pallets the Faster, Safer, and Easier Way

With the ability to handle pallet loads measuring up to 48" x 48" x 60" high; the PalletPal® Pallet Inverter is a simple, rugged machine designed to invert entire pallet loads. The pressure adjustable clamping mechanism easily secures loads up to 4,400 pounds and rotates them 180 degrees on a massive anti-friction turret bearing.

Uses include:

- Replacing broken pallets
- Switching loads to/from in-house or shipping pallets
- Transferring from pallets to slip sheets
- Replacing damaged goods at the bottom of the load

No matter what the application, a Southworth Inverter is faster, safer, and easier than manual restacking of pallets.

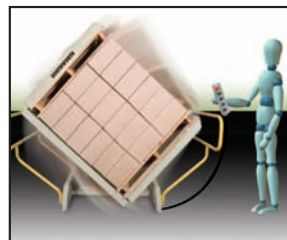

Just four simple steps...

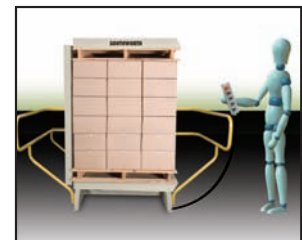

1. Add replacement pallet or slip sheet to top of load.

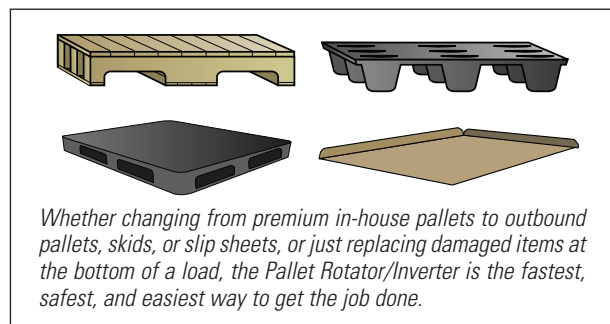

2. Place loaded pallet into inverter.

3. Use remote control to clamp and rotate load in about 15 seconds.

4. Entire cycle takes about a minute.

MODEL NO.	CAPACITY	OVERALL DIMENSIONS			MAXIMUM OPENING	MINIMUM OPENING	CLAMP SPEED	MAXIMUM LOAD SIZE			POWER	PRICE

Available Options:

BALL TRANSFER TOPS

Platforms can be supplied with pneumatic ball transfers to allow for easy repositioning of items for access to all sides or transferring loads on to or off of lifts.

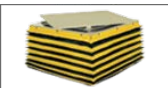

FORK POCKETS

Allow lift to be easily picked up and moved with a fork lift.

PORTABILITY / SEMI-LIVE ARRANGEMENT

A variety of portability options are available including 4 casters, or semi-live with skid spotter

BELLOWS ACCORDIAN SKIRTING

Black and yellow vinyl skirting wraps entire unit to keep underneath free from debris. Pleats expand and contract as unit raise and lowers.

PIT MOUNTED UNITS

Lifts can be configured for use in a pit. This allows the platform to sit flush with the floor when not in use to minimize obstructions.

OVERSIZED PLATFORMS

Platforms larger than standard are available. See chart above for MAX Platform dimensions.

Product Spotlight:

- 2,000, 4,000 and 6,000 lb. capacity lifts
- Lifting Heights to 56"
- Platforms up to 72" x 96"
- Optional Platforms Including Conveyor Tops, Ball Transfers, and Turntables Available
- Custom Finishes Including Two-Part Epoxy, Corrosion Resistant Coatings and Stainless Steel Available
- Standard Units Available for Quick Shipment
- Low pressure hydraulics
- Fast raising and lowering
- Fully adjustable down speed
- Heavy-duty torque tubes to minimize deflection
- Lubricated for life pins, rollers and bushings
- Full width straight through axles for increased stability throughout the travel range
- Heavy-duty wire braided hoses for maximum burst strength
- Tell-tale return hydraulic line prevents fluid spillage
- Built-in maintenance chocks
- Bolt-on power unit - neat, clean, easily accessible
